Glossary
About this guide

Reporting practice guides (RPGs) provide guidance on APRA’s view of sound practice in particular areas. RPGs frequently discuss legal requirements from legislation, regulations or APRA’s prudential and reporting standards, but do not themselves create enforceable requirements.

This RPG provides guidance to support the Economic and Financial Statistics (EFS) collection applicable to authorised deposit-taking institutions (ADIs) and registered financial corporations (RFCS) and contains:

- general guidance relating to reporting concepts applicable to more than one reporting form; and
- form-specific guidance relating to reporting concepts or variations in requirements specific to individual forms.

This guide should be read in conjunction with:

- the EFS collection, including Reporting Standard ARS 701.0 ABS/RBA Definitions (ARS 701.0), which contains definitions of the reporting concepts underlying the data to be reported; and
- Reporting Practice Guide RPG 702.0 ABS RBA Data Quality for the EFS Collection (RPG 702.0).

Through this guide, APRA, the ABS and the RBA (the agencies) seek to provide:

- a centralised source of information on the concepts contained in the reporting instructions and ARS 701.0;
- information on how key concepts may be accurately reported, including practical implementation guidance and examples; and
- guidance on verifying and keeping reporting categorisations accurate over time.

For selected reporting concepts this guide also specifies acceptable proxy data items or methodologies. These are denoted throughout as follows:

- **PROXY**: this indicates a proxy data item or methodology that is acceptable on an on-going basis; and
- **TRANSITIONAL PROXY**: this indicates a proxy data item or methodology that is acceptable on a transitional basis and includes a description of when the use of the transitional proxy is no longer appropriate.

This guide does not seek to provide an all-encompassing framework, or to replace or endorse existing industry standards and guidelines.

Subject to reporting requirements set out in the EFS reporting standards, an EFS reporting entity has the flexibility to manage its reporting for the EFS collection in a manner that is best suited to its business. Not all of the practices outlined in this RPG will be relevant for every EFS reporting entity and some aspects may vary depending upon the size, complexity and systems configuration of the EFS reporting entity.
1. General guidance

1.1 General guide to reporting by counterparty

When reporting by counterparty, reporting institutions should first consider three main elements: residency, related party status; and consolidation (Figure 1).

Figure 1: Reporting by counterparty
Elements to consider

Where relevant, reporting institutions may also be required to classify the counterparty in accordance with the Standard Economic Sector Classifications of Australia (SESCA) and/or the Australian and New Zealand Standard Industrial Classification (ANZSIC) frameworks. The following sections provide further guidance on how to determine counterparty status.

1.2 Residency

This Reporting Guidance assists in classifying counterparties by residency by explaining key concepts and definitions, as well as how residency should be updated over time. It includes practical examples to assist in classifying resident and non-resident businesses, households and financial instruments.
1.2.1 General principle of residency

The definition of residency used in the EFS collection is that defined in the Australian System of National Accounts.¹

Institutional units form the basis of the residency concept. An institutional unit is resident in one and only one economic territory; however, a business may have more than one institutional unit. For example foreign branches or foreign subsidiaries of Australian institutions are classified as non-residents (making them residents of the country in which they operate), while branches or subsidiaries of foreign institutions operating in Australia are classified as residents.

The concept of an institutional unit differs from the legal entity. For example, overseas branches or parents may be considered part of the legal entity, but should be considered as a separate institutional unit for the purposes of reporting on EFS reporting standards.

In general, the residence of each institutional unit is the economic territory with which it has the strongest connection, expressed as its centre of predominant economic interest. In most cases, it is reasonable to assume that an institutional unit has a centre of economic interest in a country if the unit has already engaged in economic activity and transactions on a significant scale in that country for 12 months or more, or if they intend to do so.

Where an institutional unit has a centre of economic activity in only one country, ownership of land and structures located within an economic territory is sufficient qualification for the owner to have a centre of economic interest in the country. However, where an institutional unit has a centre of economic interest in more than one country further information will be required to ascertain the predominant centre of economic activity of the institutional unit. Instances where an institutional unit has a central of economic interest in more than one country include:

- owning property in multiple countries; and
- households living in one country but owning property in another.

The specific treatment of residency for household and business counterparties and for financial instruments is covered in more detail below.

1.2.2 Residency of businesses

Residency Principle

As a general principle, a business is resident in an economic territory when it engages in a significant amount of production of goods and/or services from a location in the territory.

A single legal entity with substantial operations in two or more economic territories (for example, for branches, land ownership and multi-territory businesses) is considered to have a separate institutional unit in each economic territory in which it has substantial operations. In practice, taxation and other legal requirements tend to result in the use of a separate legal entity for operations in each economic territory and, as a result, the residence of each of the

subsequently identified businesses is usually clear. The ADI/RFC should record the transaction as **resident** or **non-resident** based on the country of residence of the legal entity they are transacting with.

Businesses may be **resident** in economies different from their shareholders, and branches and subsidiaries may be **resident** in different economies from their parent corporations.

**Practical implementation**

In determining residency of a business, the legal entity that you are transacting with is generally the relevant consideration. The exception to this is the case of bank branches that are located in a different jurisdiction from their head office – these should be treated as separate **institutional units** from their head office entities.

**PROXY (note exception below):** A business may be classified as a **resident** for the purposes of reporting on **EFS reporting standards** if it satisfies these criteria:

- it has a current registered business address in Australia; and
- it has a current Australian Business Number (ABN) or Australian Company Number (ACN).

If only one of these indicators is available, then the business may be classified according to that indicator only.

**PROXY (note exception below):** A business may be classified as a **non-resident** for the purposes of reporting on **EFS reporting standards** if it satisfies either of these criteria:

- its current registered business address is overseas; or
- it is currently registered as a business overseas.

The exception to this is that bank branches located in a different jurisdiction to their head office are to be classified according to their location.

**Figure 2: Business residency**

**Elements to consider**
1.2.3 Residency of households

Residency Principle

A household has a centre of economic interest when household members maintain, within the country, a dwelling or succession of dwellings treated and used by members of the household as their principal residence (for further information see Section 1.9.2 Principal place of residence). If there is uncertainty about which dwelling is the principal residence, it can be identified from the length of time spent there. Being present for 12 months or more or intending to do so is usually sufficient to qualify as having a principal residence and therefore the predominant centre of economic interest.

Individual members of households who leave the economic territory of a country and return or intend to return after a limited period [less than 12 months] continue to be regarded as residents of the original country. For example, a member of a resident Australian household who travels abroad for recreation, business, health or other purposes and returns within 12 months is treated while abroad as a resident of Australia.

Practical implementation

PROXY: In practice, a household may be classified as a resident for the purposes of reporting on EFS reporting standards if it satisfies these criteria:

- has a current residential address in Australia; and
- is considered an Australian resident for tax purposes.

If only one of these indicators is available, then the household may be classified according to that indicator only.

PROXY: In practice, a household may be classified as a non-resident for the purposes of reporting on EFS reporting standards if it satisfies either of these criteria:

- has a current residential address overseas; and
- is not considered an Australian resident for tax purposes.

Note, however, that reporting institutions are expected to maintain information on the household customer’s residential address over time. See Section 1.2.5 Updating of residency status over time for more information.
Joint applications

Where multiple individuals are party to a single transaction, the residency of each individual should be classified based on the criteria above. The entire transaction should be classified as:

- **resident** for the purposes of reporting on *EFS reporting standards* if at least one of the individuals is a **resident**; or
- **non-resident** for the purposes of reporting on *EFS reporting standards* if all of the individuals are **non-resident**.

Where the residency of each individual to a single transaction is not known, the residency of the primary customer may be used to classify the entire transaction.

1.2.4 Residency of financial instruments

**Principle**

The residency of a financial instrument is determined by the residence of the issuer rather than the country of issuance of the financial instrument itself. **Non-resident** assets/liabilities are the *ADI* or *RFC’s* asset/liability positions with **non-resident** counterparties. Similarly, **resident** assets/liabilities are the *ADI* or *RFC’s* asset/liability positions with **resident** counterparties.

**Practical implementation**

All financial instruments should be classified according to the residency of the issuer as indicated in the table below. Neither the place nor the currency of issuance should be used to determine residency of a financial instrument, except as allowed for below (for **debt securities** issued).

For **equity securities** held, the residency of the business issuing the equity should be recorded and not the residency of the exchange.
For *debt securities* held, the residency of the issuer may be determined by:

- counterparty identification and address of the issuer; and/or
- sourcing information from a third-party data provider, potentially using the International Securities Identification Number (ISIN) code as an identifier.

For *derivatives* the residency of the counterparty should be recorded.

<td>Issued into the Australian market</td>
</tr>
<tr>
<td>Issued by a resident unit</td>
</tr>
<tr>
<td>Issued by a non-resident unit</td>
</tr>
</tbody>
</table>

**Residency of the holder of a debt security**

**PROXY:** For *debt securities* issued, ADIs and RFCs are able to use the place of issuance as proxy for the residency of the counterparty holding the debt securities if information on the location of the holder is unavailable.

### 1.2.5 Updating of residency status over time

To ensure the data remain accurate over time, institutions are expected to make reasonable efforts to verify that classifications of the residency of customers, counterparties and/or financial instruments remain appropriate.

Instances of businesses and/or financial instruments changing residency are not expected to occur frequently; however, a non-negligible proportion of *households* are expected to change residency over time.

A key piece of information for verifying *household* residency over time is the residential address of the customer. Reasonable efforts to verify the customer’s residential address and, accordingly, residency, include (in order of preference):

1. communicating with customers from time to time to verify their addresses and cross-checking against residency categorisations;
2. sourcing third-party data to verify customers’ addresses and cross-checking against residency categorisations; or
3. cross-checking any customer-updated postal or residential addresses (or similar) against residency categorisations.

The agencies note that, for deposits, there is an expectation that an effort will be made to ensure residential address details are correct over time, and this expectation aligns with requirements set out in *Prudential Standard APS 910 Financial Claims Scheme* (APS 910).
1.3 Related parties

In general, a related party is any institutional unit that is owned or partly owned by the parent entity of the reporting institution, or by the reporting institution itself.

As a guide, any entities that are consolidated in the statutory financial statements produced by your institution – or the parent entity of your institution – should be considered related parties. In addition, any controlled entities, associated entities, or joint venture entities of the reporting institution or its parent entity should also be considered related parties.

Related parties may be financial institutions, non-financial businesses and/or community service organisations. They may not be members of the household or general government sectors. See ARS 701.0 for the requirements on economic sector classifications.

1.4 Domestic books consolidation

1.4.1 Identification

Domestic books consolidation refers to the positions and transactions recorded on the Australian books of reporting entities.

For businesses that are headquartered in Australia, the set of domestic books may not include all positions and transactions recorded on Australian books; some of these activities may be excluded for reporting purposes to the extent that they take place in different legal entities or notional institutional units, as detailed in Section 1.4.2 Reporting consolidation.

For businesses that are headquartered overseas, a set of domestic books for Australia are generally considered to exist if a separate (notional) institutional unit can be identified. This may involve identification of:

1. A separate legal entity formed in Australia; and/or
2. A complete set of accounts (including a balance sheet) maintained for Australia, or that it would be possible and meaningful from an economic and legal viewpoint to compile these reports if required.

It is likely a set of domestic books exist if the entity is recognised for income tax purposes in Australia, even if they have a tax exempt status. If a set of domestic books exists, then only the applicable entities listed below should be consolidated for reporting purposes.

1.4.2 Reporting consolidation

Reporting on a domestic books basis requires a different level of consolidation from statutory reporting. Any entities not consolidated for statutory reporting purposes should also not be consolidated for domestic books reporting. In addition, a number of entities that are consolidated for statutory reporting purposes should not be consolidated for domestic books reporting. Refer to the domestic books definition and the table below for details.

#### 1.4.3 RFCs reporting on behalf of other RFCs
Where there are multiple RFCs that are owned and/or controlled by the same parent entity, these RFCs may choose to either report individually or report as a group (submit a single return). The reporting method should be consistent across all forms for a given period.

RFCs reporting individually
If these RFCs choose to report individually, all RFCs that meet the required thresholds should submit returns to APRA. The reporting thresholds applied to forms will apply to the assets or liabilities of the individual RFC at the domestic books level.

When reporting individually, positions and transactions with other RFCs owned/controlled by the same parent entity should be treated as positions or transactions with related parties.

RFCs reporting as a group
If these RFCs choose to report as a group, only one of these RFCs should submit returns to APRA. The reporting thresholds applied to forms will apply to the (consolidated) domestic books assets or liabilities of all the RFCs, not the individual RFC that is submitting the return.

Each of the RFCs should inform APRA via email either the name of the institutions that they are reporting on behalf of, or the name of the institution that is reporting on behalf of them. APRA should be informed at the time that the form is submitted if any of these reporting arrangements have changed. If no reporting arrangements have changed, APRA does not need to be informed.

When reporting as a group, the positions and transactions of each of the RFCs should be consolidated within the return. Any intra-group positions and transactions between these RFCs should not be reported. Report (but do not consolidate) positions and transactions with RFCs (and any other entities) that are not part of the RFC reporting group.

1.4.4 Consolidation of SPVs by RFCs
RFCs that are a related party of an ADI should not consolidate SPVs for domestic books reporting, even if the SPVs are owned and/or controlled by the RFC or the same parent entity. All positions and transactions with SPVs owned and/or controlled by the RFC or the same parent entity should be treated as positions or transactions with related parties. Note, this also applies to all ADIs.

All other RFCs (i.e. RFCs that are not a related party of an ADI) should consolidate the positions and transactions of all resident SPVs that are owned and/or controlled by the RFC within domestic books. Any intra-group positions and transactions between the RFC and its controlled SPVs should not be reported. The reporting thresholds applied to forms will apply to the consolidated assets or liabilities of the reporting entity (i.e. the RFC and its SPVs).

1.5 Standard Economic Sector Classifications of Australia
To compile Australia’s National Accounts in accordance with the international standard – the 2008 System of National Accounts (2008 SNA) – the ABS requires balance sheet information classified by financial instruments broken down into sectoral counterparties. Sectoral counterparties are required for the ADI or RFC’s deposits, loans and derivative assets or
liabilities; and for the issuers of debt securities and equity securities held by the ADI or RFC. The sectoral classification used in the National Accounts is SESCA 2008, which in turn is based on the sectoral classification prescribed by 2008 SNA. As such, the EFS collection requires counterparty sector information based on SESCA 2008.

Counterparty sectors have been updated since the previous domestic books collection, which was based on SESCA 2000. The most significant change between SESCA 2000 and 2008 is the separate sectoral classification for investment funds and securitisers; the addition of these new sectors reflects the importance of these institutions in the Australian financial system.

Data on residents are disaggregated across a number of sectors. Data for non-residents are reported in aggregate in the non-resident sector, unless otherwise stated in the specific instructions. For example, a resident ADI will be reported in the ADI sector, while a non-resident bank will be reported in the non-resident sector. Similarly, a resident household will be reported in the household sector, while a non-resident household will be reported in the non-resident sector.

1.5.1 General sectoral classification schema

An entity is assigned to one and only one SESCA category.

- Groups of people are assigned to the household sector unless otherwise directed.
- Family trusts should be assigned to the private unincorporated businesses sector.
- SPVs do not have a unique reporting category, and should be reported in either non-financial businesses or financial institutions sectors as appropriate.

The general classification schema represented hierarchically is:

---

1.5.2 Determining the economic sector of a counterparty

ADIs and RFCs can use a variety of ways to allocate counterparties to an economic sector, for example:

- obtain information directly from the business;
- use publicly available information about the business – for example, from the business website; or
- use other information held by the reporting institution along with ANZSIC codes to map to a SESCA category – note that industry codes will not always provide a one-to-one match to economic sectors and so other information and/or alternative methods will be required for these cases (see Section 1.5.8 Mapping from ANZSIC to SESCA 2008).

Further details on the types of information that can be used to classify counterparties to specific sectors follows.

Once a business entity is classified to its one and only ANZSIC category, this will map to one SESCA category in the majority of cases. However, in a handful of cases, the ANZSIC category assigned may map into multiple SESCA classifications. In such cases, further criteria, such as the business’s legal structure and/or balance sheet composition may be used to assign a unique sectoral classification as described below.

1.5.3 Identifying investment fund sectors

There are three investment fund categories within the EFS collection. These have been adopted from SESCA 2008:

- private non-financial investment funds;
- money-market investment funds; and
- non-money-market financial investment funds.

Investment funds are collective investment schemes, such as corporations or trusts. The investment funds may be further categorised into listed and unlisted investment funds, where listed investments funds are those listed on the Australian Securities Exchange (ASX).

Investment funds in Australia which raise funds from the public operate legally as “Managed Investment Schemes” under the Corporations Act 2001 which is administered by the Australian Securities and Investment Commission (ASIC). ASIC requires that any investment fund seeking funds from retail investors be registered with ASIC and obtain an Australian Financial Services License. Registration confers an Australian Registered Scheme Number (ARSN) number. In addition to the ASIC requirements, listed investment funds are required also to adhere to the regulations and bi-annual reporting requirements set out by the ASX, similarly to listed corporations.

Investment funds that are not registered with ASIC tend to be large wholesale funds, with units not listed on the ASX – examples include large master trusts. These investments funds are used by large institutional investors such as superannuation funds and life insurance corporations as investment vehicles.

In general, ADIs and RFCs do not acquire equity in investment funds; their predominant interaction with investment funds is in providing deposit accounts and loans.
ADIs and RFCs may identify investment funds using the following methods:

- for funds that are listed on the ASX, entities may use an ASX concordance map, which will be made available on the ABS website. This concordance map categorises all listed entities (name and GICS code) on the ASX by sectoral classification;
- entities may use the ASIC ARSN number and the name of the investment fund. At the request of an ADI or RFC, APRA can provide reporting entities with a list of investment funds with ARSN numbers and names of investment funds. It is expected that APRA will obtain updated ARSN lists from ASIC annually;
- at application and review, some simple questions may be asked once the business has been identified as one of the handful of 4-digit ANZSIC classes that may fall into an investment fund SESCA category;
- PROXY: it may be possible to identify types of investment funds by title word searches – for example an investment fund that has ‘cash’ in the title it likely to be a money-market investment fund; or
- PROXY: alternatively, if none of these methodologies are able to be used then SESCA categories that are difficult to determine can be estimated using an apportionment methodology based on other available information – for example, a useful indicator may be derived from client profiles or product information from front-end systems.

Below are some questions that might assist in identifying investment funds if there is an opportunity to do so at application or review.

**Example 1: Identifying money-market investment funds or non-money-market financial investment funds**

A business customer has been categorised into financial asset investors, ANZSIC 2006 class 6420 (ANZSIC 1993 class 7340). During the application process, the following questions could be asked:

a) is your entity set up as a trust or company to raise equity funding from the public for the purposes of investing in non-financial assets?
b) If yes to (a), what are the predominant assets on your balance sheets (e.g., shares, bonds or short-term money-market instruments)?
   (i) If answered short-term money-market instruments to (b), categorise as a money-market investment fund; or
   (ii) If answered shares/bonds to (b), categorise as a non-money-market financial investment fund.

**Example 2: Identifying property/infrastructure funds**

A business customer has been categorised into the construction industry. During the application process, the following questions could be asked:

a) is your entity set up as a trust?
   (i) If answered yes to (a), the entity would be classified as a private non-financial investment fund; or

---

(iii) If answered no to [a], the entity would be classified as an other private non-financial corporation.

1.5.4 Identifying self-managed superannuation funds and other superannuation funds

To determine the classification between self-managed superannuation funds and other superannuation funds, the following methods may be used:

- the ‘Super Fund Look Up’ site on the Australian Taxation Office (ATO) website provides information on the type of fund and can be searched by ABN (or the name of the superannuation fund). The site includes publicly available information on superannuation funds regulated by APRA and the ATO. Classification types include self-managed superannuation funds.
- a list of Registerable Superannuation Entities (RSEs) regulated by APRA is available on APRA’s website. Also available from APRA’s website are lists of some of the Exempt Public Sector Superannuation Schemes (EPSSS) that are non-regulated.

1.5.5 Identifying central borrowing authorities (CBAs)

Central borrowing authorities include:

- New South Wales Treasury Corporation (NSW TCorp);
- Treasury Corporation of Victoria (TCV);
- Queensland Treasury Corporation (QTC);
- South Australian Government Financing Authority (SAFA);
- Western Australian Treasury Corporation (WATC);
- Tasmanian Public Finance Corporation (Tas Corp);
- Northern Territory Treasury Corporation (NT TCorp); and
- ACT Treasury.

1.5.6 Identifying Commonwealth general government and Commonwealth Government non-financial corporations

A list of Commonwealth Government entities by classification used for reporting in the EFS collection can be found in the ‘List of GGS, PNFC and PFC entities under the PGPA Act’ document on the Department of Finance website.

These entities can be classified according to the detail in the ‘economic sector’ column:

- ‘General Govt Sector’ should be classified as Commonwealth general government;
- ‘Public Non-financial Corporation’ should be classified as Commonwealth Government non-financial corporations; and
- ‘Public Financial Corporation’ should be classified as financial institutions.

---

4 See: http://superfundlookup.gov.au
1.5.7 Miscellaneous classifications

Sovereign Wealth Funds
Sovereign wealth funds owned by the Commonwealth Government, such as the Future Fund and the Australian Government Investment Funds, should be classified in the Commonwealth general government sector.

Issuers of covered bonds
As covered bonds can only be issued by ADIs, resident issuers of covered bonds should be classified as ADIs.

Individuals acting on behalf of businesses
Where the ADI or RFC has positions/deposit accounts/lending facilities with a business that have been recorded under the name of an individual (such as a deposit account for a sole trader that is in the individual’s name rather than the business name), the positions/transactions should be reported under the appropriate category according to the nature of the business. These positions/transactions should not be reported in the household sector.

This analysis should be applied to each individual position/deposit account/lending facility, and not all positions/deposit accounts/lending facilities need to be allocated to the same sector. For example, an individual has two credit cards in their name. One is for personal use and should be allocated to the household sector, and the other credit card is for business use and should be allocated to the private unincorporated businesses sector.

Where there is a position/deposit account/lending facility that combines elements of business and personal purposes, the predominant purpose class should apply. For more information, see Section 1.8 Identifying (predominant) purpose class and sub-class.

Where the institution has no information to suggest that the position/deposit account/lending facility is for business purposes, it should be allocated to the household sector.

1.5.8 Mapping from ANZSIC to SESCA 2008
ADIs and RFCs should classify counterparties into the SESCA 2008 by using the definitions provided in ARS 701.0.

For those institutions that have yet to fully implement SESCA 2008, mapping of counterparties from ANZSIC classification would generally be acceptable, provided further information is sought where required to appropriately allocate counterparties in ANZSIC categories without a one-to-one mapping to SESCA 2008. ADIs and RFCs should make a reasonable effort during the application process and annual reviews with business customers to identify the appropriate sectoral classification.

For a full list, see https://www.finance.gov.au/investment-funds/
A concordance map from ANZSIC 2006 to SESCA 2008 will be provided on the ABS website\textsuperscript{8} to assist institutions with classifying counterparties. Guidance on classifying into industry code under ANZSIC 1993 or 2006 is also available on the ABS website\textsuperscript{9}.

The concordance map shows the derivation of the sectoral classification required in the EFS collection from ANZSIC 2006. It begins with the concordance of 4-digit ANZSIC 2006 to the counterparty sectors listed on the EFS forms.

The map illustrates that, for a majority of the 4-digit ANZSIC 2006 classifications, there is a one-to-one relationship into the sector counterparties listed on EFS reporting standards. However, there are instances where this one-to-one relationship does not hold (i.e. one ANZSIC 2006 industry maps to more than one sector in the EFS collection). These situations are listed in the table below.

\begin{table}[h]
\begin{tabular}{|l|l|}
\hline
ANZSIC 2006 industry & Sector in EFS collection (based on SESCA 2008) \\
\hline
\textit{Construction} & 1. private non-financial investment funds; \\
 & 2. other private non-financial corporations; or \\
 & 3. private unincorporated businesses. \\
\hline
\textit{Rental, hiring and real estate services} & 1. private non-financial investment funds; \\
 & 2. other private non-financial corporations; or \\
 & 3. private unincorporated businesses. \\
\hline
\textit{Education and training} & 1. other private non-financial corporations; \\
 & 2. private unincorporated businesses; \\
 & 3. commonwealth general government; or \\
 & 4. state, territory and local general government. \\
\hline
\textit{Health care and social assistance} & 1. other private non-financial corporations; \\
 & 2. private unincorporated businesses; \\
 & 3. commonwealth general government; or \\
 & 4. state, territory and local general government. \\
\hline
\textit{Arts and recreation services} & 1. other private non-financial corporations; \\
 & 2. private unincorporated businesses; \\
 & 3. commonwealth general government; or \\
 & 4. state, territory and local general government. \\
\hline
\textit{Other services} & 1. other private non-financial corporations; \\
 & 2. private unincorporated businesses; or \\
 & 3. community service organisations. \\
\hline
\end{tabular}
\end{table}

\textsuperscript{9} See: Australia New Zealand Standard Industry Classification
Non-depository financing [part of the Financial and insurance services industry]
1. securitisers;
2. central borrowing authorities; or
3. financial institutions n.e.c.

Financial asset investing [part of the Financial and insurance services industry]
1. money-market investment funds;
2. non-money-market financial investment funds; or
3. commonwealth general government.

Superannuation funds [part of the Financial and insurance services industry]
1. self-managed superannuation funds; or
2. other superannuation funds.

For these industry categories, further information would be required to appropriately allocate the counterparty to the relevant economic sector.

1.5.9 Updating of SESCA classification over time

It is not expected that institutions will often change SESCA categories. However, if a reporting institution becomes aware that a business has changed industry or incorporation status (for example, at an annual review), then the SESCA category should be updated accordingly.

For example, if a business is originally classified as a private unincorporated business but then changes its business structure to a company, it should be re-classified from the point that the change occurred to the other private non-financial corporations category.

1.6 Australian and New Zealand Standard Industry Classification

For private and public sector businesses, a breakdown of counterparties into industry sectors is required for some forms [ARF 741.0 and ARF 742.0]. The EFS collection contains 21 industry classifications that are based on ANZSIC 2006, which has been updated since ANZSIC 1993 to capture emerging industries such as information technology, to better reflect the current economy and to align with international industry standards.¹⁰

A borrower is assigned to an industry based on its predominant activity, and each borrower can only be assigned to one industry.

1.6.1 Mapping ANZSIC 1993 to ANZISC 2006

For those entities that currently classify businesses to industries based on 4-digit ANZSIC 1993, it will generally be acceptable to map from ANZSIC 1993 to ANZSIC 2006 at the 4-digit level using the mapping available on the ABS¹¹ website, in combination with a simple apportionment mechanism where there is a one-to-many split.

¹⁰ See: Australia New Zealand Standard Industry Classification
¹¹ For the 4-digit level mapping between ANZSIC 1993 to ANZSIC 2006, see: http://www.abs.gov.au/AUSSTATS/abs@.nsf/Lookup/1292.0.55.005Main+Features12008?OpenDocument
• A number of the one-to-many mapping instances occur where all options are within the same ANZSIC industry (at the 2-digit level). In these cases, reporting institutions may determine how to map to ANZSIC 2006. Reporting institutions could choose to either:
  o PROXY [note exception below]: allocate all to a single 4-digit code; or
  o PROXY [note exception below]: allocate across multiple codes.
• The other one-to-many mapping instances involve a series of options that cross ANZSIC industry (at the 2-digit level). In these cases, there are a few potential options:
  o PROXY [note exception below]: allocate evenly between the 4-digit codes;
  o PROXY [note exception below]: allocate randomly across the 4-digit codes; or
  o PROXY [note exception below]: where the bulk of the options are within the same division, map to a single 4-digit code in that division.

The exception to this is in relation to commercial property. For the ANZSIC 1993 code 7712 – Commercial Property Operators & Developers, ADIs and RFCs will be required to correctly allocate between 3211 – Land Development and Subdivision and 6712 – Non-Residential Property Operators. It is expected that institutions will need to obtain further information from their customers in order to allocate the correct ANZSIC in this instance (see Section 1.6.2 Sub-industries below).

1.6.2 Sub-industries

The industry sectors identified on ARF 741.0 and ARF 742.0 only require disaggregation at the Division level (i.e. a 1-digit code under ANZSIC 2006) with the exception of Construction and Financial and insurance services.

For Construction three further sub-sectors are identified, which require at most a 3-digit code under ANZSIC 2006. However, if reporting institutions intend to rely on a mapping from ANZSIC 1993 to ANZSIC 2006, information at the level of 4-digit ANZSIC 1993 codes may be required.

For Financial and insurance services, the more specific disaggregation requested aligns with SESCA-based categories, rather than ANZSIC 2006 industries.

#### 1.6.3 Use of International Industry codes

**PROXY**: In cases where only international based industry codes such as the North American Industry Classification System (NAICS) or the International Standard Industrial Classification (ISIC) are available, then it is acceptable to map these back to the related ANZSIC categories at the two-digit or one-digit level. Mapping to the four-digit ANZSIC codes is not recommended due to many one-to-multiple mappings. There is no direct mapping from NAICS to ANZSIC, but an **ADI** or **RFC** can use published mappings from NAICS to ISIC\(^{13}\), ISIC to NAICS\(^{12}\) and ANZSIC to ISIC\(^{14}\). These can be used either in isolation or in combination to map to the ANZSIC requirements for the **EFS collection**.

#### 1.6.4 ANZSIC captured at the point of origination

To assist in the determination of the correct ANZSIC for a business at the point of origination the following may assist:

- at the time of registering their Australian Business Number with the tax office, businesses are required to self-identify their own ANZSIC and therefore may be able to provide their ANZSIC upon request; or

---

\(^{12}\) See: [https://www.census.gov/egos/www/naics/concordances/concordances.html](https://www.census.gov/egos/www/naics/concordances/concordances.html)

• an ANZSIC coder is available on the ABS website. The web-based search function uses key word search functionality to return a list of possible ANZSIC codes with activity descriptions.

1.6.5 Updating of ANZSIC over time

It is not expected that institutions will often change ANZSIC categories. However, if a reporting institution becomes aware that a business has changed industry (for example, at an annual review), then the ANZSIC category should be updated accordingly from that point forward.

1.7 Business size

For private and public sector businesses, a breakdown of counterparties by business size is required for some forms (ARF 741.0, ARF 742.0 and ARF 730.1). These business size categories are based on definitions similar to those used by the Basel Committee for Banking Supervision (BCBS)/APRA in their standards for institutions following the internal-ratings based approach to credit risk; however, they are written such that they can be applied by all reporting institutions, regardless of whether they are required to meet BCBS/APRA standards.

Counterparties in the private and public sector businesses category need to be assigned to one of: small, medium, or large business size categories.

If the reporting institution already classifies the counterparty as SME retail, SME corporate or Corporate in line with the BCBS/APRA methodology, then a one-to-one mapping can be used with:

• SME retail corresponding to small;
• SME corporate corresponding to medium; and
• Corporate corresponding to large.

This means that, where the reporting institution’s internal decisions lead to it deviating from the turnover and exposure size metrics detailed in ARS 701.0 – perhaps, for example, because a business is viewed as more complex or had previously had turnover in a higher bucket – that institution is able to report in line with its internal categorisations.

Where an institution does not categorise counterparties, or certain types of counterparties, according to this methodology, then they would be required to use the turnover and exposure size metrics to allocate the counterparties to the relevant business size category.

Categorisations based on exposure size and turnover should be allocated at origination. The exposure size should be reviewed periodically (at least annually). There is no requirement to

15 See the ‘Search Facility’ in 1292.0 – ANZSIC, 2006 (Revision 2.0), available at:
http://www.abs.gov.au/ausstats/abs@.nsf/Latestproducts/1292.0Search12006%20(Revision%202.0)?opendocument&tabname=Summary&prodno=1292.0&issue=2006%20(Revision%202.0)&num=&view
update turnover data during the life of a given facility unless the reporting institution becomes aware that the categorisation is no longer appropriate.

1.7.1 Exposure size
The measure of exposure to be used is total business-related exposure.

1.7.2 Turnover
Reliable measures of turnover include:

- tax returns submitted to the ATO;
- Business Activity Statements submitted to the ATO;
- financial reports of the business; and
- reports from the business’s accountants or auditors.

PROXY: Where turnover data are not available because the business was recently formed, then the business should be classified as small or medium based on the exposure of the reporting institution to the business.

PROXY: Where a new business has been formed following a merger or demerger, then reporting institutions would be expected to use a sensible method to determine the appropriate category.

TRANSITIONAL PROXY: Where turnover information for an existing business customer (not recently formed) is not currently available, the reporting institution should use business-as-usual points of contact (e.g. annual reviews) prior to the commencement of reporting for the EFS collection in 2019 to allocate the counterparty to the appropriate category based on turnover information. Where no business-as-usual points of contact occur within this time period, the ADI or RFC may allocate based on an internal allocation methodology – for example, categorising based on the internal business segment that the counterparty interacts with. This would be updated based on turnover information at the next business-as-usual point of contact with the counterparty. Once allocated, there is no requirement to update turnover data during the life of a given facility unless the reporting institution becomes aware that the categorisation is no longer appropriate.

1.7.3 ARF 730.1
PROXY: When reporting fees charged on ARF 730.1, where the counterparty falls with the private and public sector businesses sector but the ADI or RFC does not provide finance to the counterparty, the counterparty may be classified as small, medium or large based on a consistent application of an internal allocation methodology. Such an allocation methodology should be informed by information such as the internal business segment the counterparty interacts with, the size of any deposits they hold with the ADI or RFC, or other known characteristics of the counterparty. This allocation methodology should be made available to APRA on request. Note that this allocation methodology may not be used where the ADI or RFC provides finance to the counterparty.
1.8 Identifying (predominant) purpose class and sub-class

Figure 4: Purpose Types
*Purpose class, sub-class and property purpose*

1.8.1 Identifying purpose class

The *purpose class* (i.e. *housing*, *business* or *personal*) that the funds will be used for determines how finance should be reported.

*Purpose class* is to be allocated based on information provided by the customer.

Product type may be used as an input to determine the *purpose class*, but it is unlikely to be appropriate to rely on this data point exclusively in all situations. This is because alignment between product types and *purpose classes* may vary according to institution-specific policies and/or may change over time.

In general, there are a few rules of thumb when assigning *purpose class* that may be helpful to note:

1. All finance extended via business lending products may be classified as being for *business* purposes, but not all finance for *business* purposes need be provided under a business lending product.

For example, an individual may seek finance via other types of products for use in their business. If the *ADI* or *RFC* is aware that the funds are being used for a business (for example, the customer makes a statement to this effect during the origination process) then this should be classified as *business* finance. Note, however, that if the customer does not disclose their intent to use the finance for this purpose, and the *ADI* or *RFC* has no other information to suggest this alternate use, then the *ADI* or *RFC* would correctly...
classify this finance to an individual as housing or personal based on the information provided by the customer).

2. Security type (e.g. a residential property) is not directly relevant to the purpose class definitions, but may be a useful input depending on institution-specific lending policies.

Specifically, not all housing finance need be secured by residential property, and finance for personal or business purposes may be secured by residential property (e.g. a home equity loan).

Practical implementation

PROXY: In practice, finance extended via business lending products may be classified as being for business purposes. Note, however, that not all finance for business purposes need be provided under a business lending product.

Example 1: Finance secured by a residential property

A household takes out a new loan for personal use, for example paying for a holiday and/or buying shares. The funds are secured against a residential property owned by the household, perhaps via a home equity loan.

This loan should be classified as personal not housing. In making this determination, the following points should be recognised:

- the product type (e.g. a home equity loan) is not an appropriate indicator of purpose class in this situation;
- the fact that the finance is secured by residential property is not relevant in identifying the purpose class of the finance; and
- because the use of the funds does not relate to the construction or purchase of residential property, or to finance alterations, additions and repairs to residential property the finance purpose class cannot be housing.

Example 2: Purchasing and/or constructing residential property

Consider the following cases:

a) A developer borrows funds to purchase residential land and construct an apartment block (i.e. dwellings). The apartments will later be sold to households for their use.

b) A self-managed superannuation fund borrows funds to purchase a residential property that will be rented out.

In both instances, the finance should be classified as business not housing. In making this determination, the following points should be recognised:

- the sector borrowing the funds is a business, not a household; and
- whether or not the finance is secured against residential property is irrelevant.
1.8.2 Assessing the predominant purpose at origination

Where finance is to be used for more than one purpose, the entire amount of the finance should be classified according to the predominant purpose (i.e. the purpose for which the largest share of the funds will be used).

Practical implementation

In general, where it is known that the funds will be used for more than one purpose but: a) there is insufficient information to make a reasonable judgement about what the largest share of funds will be used for by a household; or b) there is an even split between multiple purpose classes (e.g. 50/50), please classify the finance as follows:

- **Housing** and **personal** – classify as **personal**;
- **Housing** and **business** – classify as **business**; and
- **Business** and **personal** – classify as **business**.

Note that, where finance is classified as predominantly for **housing** purposes, reasonable effort must be made to identify the **property purpose** in order for the finance to be further classified as owner-occupier or investor (e.g. ask the borrower for the nature of use of the property) – see Section 1.9 Residential property purpose – owner-occupied and investor housing.

The following scenarios typically present some challenges for classification:

- **revolving credit facilities** that are **secured by residential property** (e.g. **home equity loans**) or **reverse mortgages**;
- **alterations, additions and repairs**; and
- refinances of existing **fixed-term** finance by **households**.

Accordingly, further guidance on the treatment of these scenarios is provided below.

1.8.3 Revolving credit facilities secured by residential property and reverse mortgages

A **revolving credit facility** that is **secured by residential property** (e.g. a **home equity loan**) can be taken to fund a range of activities, including the purchase of a **residential property**, **alterations, additions and repairs** to **residential property**, investment purchases (e.g. shares), **household** consumption spending (e.g. holidays or motor vehicles), or working capital for a small business.

**Revolving credit** extended to a **household** would generally be expected to be for **personal** purposes unless there is any indication that the funds are to be used for **housing** or **business** purposes.

If the borrower indicates that the funds will predominantly be used for **housing** purposes, then classify accordingly. The agencies expect one of the main uses of a **revolving credit facility** that is **secured by residential property** for **housing** purposes would be for **alterations, additions and repairs** (although use is of course not limited to this). Please note, where a **housing** purpose is nominated, reasonable effort must also be made to identify the nature of the **property purpose** (see Section 1.9 Residential property purpose – owner-occupied and investor housing).
Example 3: Finance for multiple purposes

Consider the case where a household takes out a revolving credit facility for housing and personal purposes (e.g. alterations, additions and repairs to a residential property and household consumption spending such as paying for a holiday or motor vehicle). The facility should be classified according to what the largest share of the funds will be used for.

If a majority of the funds are to be used for the alterations, additions and repairs, then the finance should be classified as housing. If a majority of the funds are to be used for household consumption spending, the finance should be classified as personal.

If there is insufficient information to reasonably judge whether the share of funds for alterations, additions and repairs is larger than the share of funds for household consumption spending, then the entire amount should be classified as personal.

1.8.4 Alterations, additions and repairs – housing or personal?

Any changes to a residential property that will remain part of that property in the event of the sale of the property should be classified as for housing (prior to the application of the predominant purpose principle, if relevant), provided the finance is taken out by a household.

The following should be included as housing:

- permanent swimming pools;
- sheds;
- permanent furnishings such as floor or window coverings;
- stoves, cooktops, range hoods and dishwashers;
- cupboards / shelves permanently attached to the property; and
- landscaping.

The loan purpose sub-class should be reported as alterations, additions and repairs where this use of funds is the predominant purpose.

Please note: the uses described above would not qualify as construction for housing purposes as this concept exclusively relates to the construction of new dwellings.

Furnishings not attached to the property, such as furniture and removable electrical goods, should be included as personal.

1.8.5 Refinances

Internal refinance

When additional finance is approved for an existing borrower and combined with existing finance provided by the ADI or RFC, the predominant purpose class should be updated if:

a) the additional finance is for a different purpose class than that of the existing finance; and
b) the additional finance is greater than the outstanding amount of existing finance.

If the reporting institution also submits the relevant finance form (ARF 741.0, ARF 743.0 or ARF 745.0) and:
• the *purpose class* has changed, the *purpose sub-class* for reporting the new *commitment* should reflect the use of the additional funds [i.e. it should not be reported as an *internal refinance*];
• the *purpose class* has not changed, the finance should be classified as an *internal refinance* at the *purpose sub-class* level for reporting the new *commitment*.

Should further additional finance subsequently be approved, the same process should apply. However, when reassessing predominant *purpose class* the most recent classification purpose assigned to the existing finance may be assumed to apply to the entire outstanding amount [i.e. the amount and purpose of additional finance approved does not need be tracked over time].

**External refinance**

Where a borrower refinances from another lender – an *external refinance* – reporting institutions should identify the predominant *purpose class* of the total amount of the new *commitment* (including any additional finance) and, if the reporting institution submits the relevant finance form (ARF 741.0, ARF 743.0 or ARF 745.0) to classify the finance as an *external refinance* at the *purpose sub-class* level for reporting of the new *commitment*.

**Figure 5: Refinances and Predominant Purpose Class**

**Elements to consider when reporting an internal or external refinance**

- Is the pre-existing finance provided by another lender?
  - If yes: Report as a new *commitment* for an *external refinance*.
  - If no:
    - Has the predominant *purpose class* changed?
      - If yes: Report as a new *commitment* for the existing *purpose class* and identify the *purpose sub-class* of the additional finance. Do not report as an *internal refinance*.
      - If no: Report as a new *commitment* for the existing *purpose class* and as an *internal refinance*, regardless of the *purpose sub-class* of the additional finance.

**Example 4: Additional finance for a different purpose**

Consider a household approved for additional finance [by their current lender] for *personal* purposes, for example buying a car, on top of an existing *housing loan*. The relevant test in applying the predominant purpose principle is whether the balance of the new finance for a *personal* purpose is greater than the outstanding balance on the original *housing loan*. 
• If the outstanding balance on the existing housing loan is larger than the amount of new finance at the time of approval, the whole loan should continue to be treated as predominantly for housing purposes. The total value of the loan should be reported as an internal refinance on the ARF 743.0 (if applicable) and the new total outstanding balance reported as housing credit.

• If the outstanding balance on the existing housing loan is smaller than the amount of new finance at the time of approval, the whole amount should then be treated as predominantly for personal purposes. The total value of the loan should be reported on the ARF 745.0 (if applicable) as a new commitment and the new total outstanding balance should be reported as personal credit [with the outstanding balance of the original loan removed from housing credit]. The purpose sub-class of the new commitment should reflect the use of the additional finance (e.g. buying a car). Because the finance purpose class has changed it should not be reported as an internal refinance.

Example 5: Multiple top-ups

Let the outstanding balance of an existing housing loan be $200,000 and a top-up for personal purposes be $40,000. Given the outstanding balance of the existing housing loan is greater than the top-up for personal purposes, the whole loan amount ($240,000) should be continue to be treated as predominantly for housing purposes and the new total outstanding balance should be reported as housing credit. Similarly, the total value of the loan ($240,000) should be reported as an internal refinance on the ARF 743.0 (if applicable).

Let the outstanding balance of the loan then be paid down to $100,000 and the household approved for an additional $60,000 for personal purposes (e.g. a wedding and honeymoon). The current classification (i.e. housing) may be assumed to apply to the total outstanding balance when comparing it to the amount of new personal finance in determining predominant purpose. Thus, the total loan would continue to be classified as housing because the existing outstanding balance ($100,000) is larger than the additional finance for personal purposes ($60,000). There is no expectation that the amount and purpose of subsequent top-ups be recorded in a cumulative manner and used in determining predominant purpose class.

1.8.6 Maintaining the predominant purpose-class classification over time

As noted above, the agencies expect that a reasonable effort should be made during the application process to identify the predominant purpose-class (and purpose sub-class) of the finance (e.g. asking the borrower). Unless the lender receives new information that would call into question the purpose-class classification (e.g. through a refinance), the initial purpose-class may be retained over time. Similarly, the purpose sub-class need only be recorded at origination or when refinanced.

However, the residential property purpose (i.e. owner-occupied or investment) should be actively maintained over the course of the life of the loan (see Section 1.9 Residential property purpose – owner-occupied and investor housing).

1.8.7 Identifying purpose sub-class

Once a purpose-class has been assigned, the predominant purpose principle should also be used to identify the purpose sub-class. That is, when finance is taken out for multiple purpose
sub-classes, the finance should be classified according to the predominant purpose sub-class. Note that, where the use of finance crosses multiple purpose sub-classes, only those purpose sub-classes relevant to the predominant purpose sub-class are options for the predominant purpose sub-class.

The exception to this is where additional finance is approved and combined with existing finance (see Section 1.8.5 Refinances).

1.9 Residential property purpose - owner-occupied and investment housing

As for the determination of the purpose class, product type may be used as an input to determine the property purpose (i.e. owner-occupied or investment), but it is unlikely to be appropriate to rely on this data point exclusively. This is because reporting entities’ lending policies may not align with the definition owner-occupied or investment and because the use of the property by the customer may change over time.

1.9.1 Loan purpose vs collateral

The loan should be classified as owner-occupied or investment based on the use of the property for which the funds have been borrowed (i.e. the property being purchased, constructed, improved, or having repairs or maintenance carried out). The use of the property serving as collateral, where this differs, should not be used to determine the residential property purpose.

For example, a borrower owns the property they live in (owner-occupied) and has borrowed some funds to purchase an investment property. The loan for the purchase of the investment property was partially secured or fully secured against the owner-occupied property. The loan should be reported as investment, irrespective of the loan being partially secured or fully secured against the owner-occupied property.

1.9.2 Principal place of residence

In general, a borrower will have only one principal place of residence, which will be the property that they live in the majority of the time.

In practice, the principal place of residence may be determined by:

- asking the borrower; or
- PROXY: using the borrower’s residential address.

Example 1: vacation / holiday homes

A borrower owns two houses that are not rented out or used by any other persons. The borrower lives in one for eight months of the year, and the other for four months of the year. The borrower’s principal place of residence will be the house that the borrower lives in for eight months, and the loan used to purchase that property would be classified as an owner-occupied loan. The house that the borrower lives in for four months is not the borrower’s
The *principal place of residence*, and the *loan* used to purchase that property would be classified as an *investment loan*.

**Example 2: house for family members**

A borrower owns two houses – the borrower lives in one house during the week and their children live in the other house (and may or may not pay rent). The borrower stays in the house with the children on weekends. The borrower’s *principal place of residence* will be the house that the borrower lives in during the week, and the *loan* used to purchase that property would be classified as an *owner-occupied loan*. The house that the borrower’s children live in is not the borrower’s *principal place of residence*, and the *loan* used to purchase that property would be classified as an *investment loan*.

**1.9.3 Multiple borrowers**

If there are multiple borrowers, then classify the *loan* as *owner occupied* if at least one of the borrowers meets the relevant definition.

**1.9.4 Construction and bridging loans**

As defined in ARS 701.0, the criterion on which reporting institutions should seek to classify *housing loans* as *owner-occupied* or *investment* is whether the *residential property* is serving or will shortly serve as the *principal place of residence* for the person[s] taking out the *loan* [i.e. the customer has indicated that they plan to move into the *residential property* after *construction* has been completed and before the property is rented out].

As a result, a customer would, in most cases, be expected to have a maximum of one *owner-occupied loan*. However, one exception involves the case in which a customer has a *loan* for a *property* that is their *principal place of residence* and has taken out a *loan* for a new *property* that will shortly be their *principal place of residence*. Common examples are *construction loans* or bridging *loans*, where the borrower currently has an *owner-occupied loan* and also intends to transfer their *principal place of residence* to their new *property* shortly. During the overlap period these borrowers may have more than one *owner-occupied loan*.

**1.9.5 Rental income and investor loans**

The use of rental income from the property to be purchased in the serviceability assessment does not automatically classify the *loan* as an *investment loan*. It is possible that the borrower is using or will shortly use the property as their *principal place of residence*, but that the borrower also is or intends to sublet a room.

**Example 3: renting out a room in an owner-occupied property**

A borrower purchases a *property* that will be their *principal place of residence*. In their *loan application* they indicated that they will be renting out one of the bedrooms and will receive rental income. This would be classified as an *owner-occupied loan* given that it will be the borrower’s *principal place of residence*. The rental income is irrelevant in this example.
1.9.6 Non-residents and owner-occupied loans

It is necessary to separately identify and report lending to non-resident households for housing as being either owner-occupied or investment. The following is an assessment of whether such loans are owner-occupied or investment. Loans to non-residents should be classified as owner-occupied in the following circumstances:

a) where the residential property for which the funds are borrowed is located overseas and this residential property will serve as the borrower’s principal place of residence; or
b) where the residential property for which the funds are borrowed is located in Australia and this residential property will serve as the borrower’s principal place of residence (i.e. the non-resident borrower will become a resident).

Loans to non-residents for the purchase of residential property located in Australia that will not serve as the borrower’s principal place of residence should be classified as investment. Whether the property will act as the principal place of residence for family members of the non-resident borrower is irrelevant.

1.9.7 Updating owner-occupied / investment status over time

Reasonable steps should be taken to ensure the property purpose is correct at origination and that it remains accurate over time in the values reported for credit outstanding.

For example, if a borrower has an owner-occupied housing loan, and the property location and the borrower’s residential address are available, then their residential address should match the address of the property for which the finance was sought. If the borrower updates their residential address to be different from the address of the property for which the finance was sought, the loan should be reclassified as an investment loan from the date that the address was changes.

Alternatively, reporting institutions may elect to re-confirm loans status at regular intervals (e.g. every three years). This might be done when borrowers initiate contact with the reporting institution for another reason or when customer-initiated contact has not occurred within an appropriate period (e.g. three years), the reporting institutions may initiate contact with the borrower directly.

Please note, this guidance is intended for statistical reporting purposes only and should not be interpreted as relevant to internal business decisions regarding what products or financing arrangements are available to a given customer.

1.10 Secured by residential property

Any lending for which some amount of collateral exists to support the loan exposure should be reported as secured finance. That is, there is no minimum collateral threshold for a loan to be classified as secured. Only lending for which there is no collateral or other arrangement to secure the loan should be reported as unsecured.

In the case of reporting items as secured by residential property, however, the following criteria must be met.
• the value of the collateral for the loan represents 50 per cent or more of the loan balance; and
• 50 per cent or more of the collateral is residential property.

If the above criteria are met, the entire loan balance should be reported as secured by residential property.

Figure 6: Secured by Residential Property

Elements to consider

1.11 Location of property

1.11.1 Housing

Institutions should collect and report housing finance based on the location of the property for which the customer is borrowing the funds (e.g. the address of the property being purchased).

This information will assist reporting institutions by providing a verifiable data point against which they can cross-check customers’ residential address to assist in determining whether a housing loan is owner-occupied or investment (see Section 1.9 Residential property purpose – owner-occupied and investor housing).

If this information is not available to be reported, the ADI or RFC may report the location of housing finance according to the following proxy.
PROXY: An ADI or RFC may use the location of the collateral securing a loan for housing purposes to proxy the location of the property for reporting by state. Where the loan is collateralised against properties located in different states, the ADI or RFC should use an appropriate methodology to determine the property location for reporting by state.

1.11.2 Business

When reporting on ARF 741.0, institutions should report fixed-term business loans for construction or the purchase of property (by small or medium businesses) based on the location of the property for which the customer is borrowing the funds (e.g. the address of the property being purchased or constructed) when reporting by state.

1.12 Types of financial assets and liabilities

1.12.1 Loans and finance leases

Generally include:

- overdrafts;
- secured and unsecured lending;
- finance leases;
- credit card balances;
- fixed-term loans;
- mortgage lending;
- commercial loans;
- redeemable preference share finance not evidenced by a security; and
- subordinated loans.

Generally exclude:

- reverse repos;
- loans and finance leases that have been written off;
- associated deferred tax assets in the amounts reported for collective provisions or individual provisions;
- debt securities; and
- deposits.

Fixed-term loans vs revolving credit facilities

The key distinction between a fixed-term loan and a revolving credit facility is that repayments of unused credit available that may be redrawn up to the original credit limit, while repayments of fixed-term loans (other than into redraw facilities) generally cannot be redrawn.

Both fixed-term loans and revolving credit facilities can have a fixed period when the facility is due to end. This is not sufficient to classify a facility as a fixed-term loan.

Example of revolving credit facilities with a fixed term:
A lending facility where the borrower can repeatedly draw down and repay the finance up to a specified limit. This specified limit does not decline over the life of the facility. The facility has a fixed term of one year – at the end of the year, the facility will either be cancelled (and fully repaid), or renewed.

Generally, revolving credit facilities include:

- credit cards; and
- overdrafts.

Valuation of Finance Leases

The value of finance leases should be reported as either:

- the capital cost of new goods;
- the written-down value of goods re-leased; or
- the purchase price of second-hand goods;

For finance leases where the full value of the goods under lease is not financed by one corporation (e.g. partnership and syndicated leases), report the value as your share of the full value.

For revolving lease facilities (such as master leases), report the value of goods acquired at each draw down against such facilities. Exclude the value of commitments to provide a leasing limit or to increase a leasing limit.

1.12.2 Deposits

Generally include:

- offset accounts;
- account balances with resident and non-resident financial institutions;
- purchased payment facilities such as smart cards and electronic cash; and
- non-negotiable certificates of deposit.

Generally exclude:

- debt securities;
- payables due to counterparties arising from the first leg of a repurchase agreement;
- treasury-related short-term borrowings from resident ADIs and non-resident banks;
- loans (including arranged and unarranged overdrafts); and
- finance leases.

1.12.3 Debt securities

Generally include:

- bills of exchange;
- negotiable certificates of deposit;
- commercial paper including promissory notes and asset-backed commercial paper;
- treasury notes;
Generally exclude:

- **deposits**;
- **loans**;
- **finance leases**; and
- **derivatives**.

### 1.12.4 Equity securities

Generally include:

- ordinary shares;
- units in trusts; and
- **preference shares**.

Generally exclude convertible notes prior to conversion.

### 1.13 Borrower-accepted commitments

**RFCs** should report **borrower-accepted commitments** at the point at which the borrower has indicated acceptance of a firm offer to provide finance consistent with the definition.

**PROXY:** **ADIs** should also report on this basis, except where capital adequacy guidelines [e.g. APG 112 – Standardised Approach to Credit Risk] require recognition of a commitment at the point at which a firm offer of finance is made [i.e. before customer acceptance].

This means that **ADIs** taking advantage of the long-standing concessional treatment for residential mortgages should report in a manner consistent with the definition of a **borrower-accepted commitment** for this form of finance. However, other forms of finance may be reported earlier (i.e. when a firm offer to provide finance is made but prior to borrower acceptance).

**Practical implementation**

When reporting at the point of borrower acceptance, the reporting institution may determine the month in which a **borrower-accepted commitment** is accepted by the borrower with reference to either:

- **PROXY:** the month in which it receives a signed contract indicating the borrower(s) has/have accepted the reporting institution’s offer of finance; or
- the date the contract is signed by the borrower(s).
New **borrower-accepted commitments** that have been cancelled in the same reporting period they are recognised should not be reported as a new **borrower-accepted commitment**.

### 1.13.1 Cancellations and reductions in previously committed credit limits

Include:

- borrower-initiated and lender-initiated cancellations and reductions;
- cancellations of and reductions in drawn and undrawn **commitments**.

Exclude:

- reductions due to amortisation of a **loan** or **finance lease**; and
- reductions due to expiration of a contract.

### 1.14 Identifying facilities

Multiple accounts/lending agreements should only be considered part of a single lending **facility** where they differ by **interest rate** type (**fixed interest rate** or **variable interest rate**) and/or repayment type (**interest only** or **amortising**).

If the accounts/lending agreements differ by characteristics that are not the result of different **interest rate** or repayment types – for example, **revolving credit** and **fixed-term** credit, or two separate **fixed-term** lending agreements of different **original maturities** – then these should **not** be considered part of a single lending **facility**.

**Practical implementation**

When grouping accounts/lending agreements into a **lending facility** apply the following logic:

1. Disaggregate accounts/lending agreements to the same borrower[s] to the lowest level possible.

2. For those accounts/lending agreements approved at the same point in time and/or as a part of the same **application**, consider whether they are for the same purpose.
   a. In comparing purposes, first apply the predominant purpose principle to each separately identifiable account/lending agreement.

3. For those accounts/lending agreements that were approved at the same point in time as part of the same **application** and for the same (predominant) purpose, treat those that are similarly structured and differ only by characteristics relating to **interest rate** type (**fixed interest rate** or **variable interest rate**) and/or repayment type (**interest only** or **amortising**) as belonging to a single **lending facility**.

For example, a **housing loan application** to be split 25/75 into **fixed interest rate** and **variable interest rate** products may be recorded as two new **loan** accounts but would be regarded as one lending **facility**.

**Facilities** with a mix of **interest rate** types and/or repayment types may be referred to as ‘split’ **facilities**.
1.14.1 Apportioning number

Where the number is required to be reported along an interest rate or repayment type dimension (e.g. fixed interest rate and variable interest rate, or amortising and interest-only), report each facility once according to the predominant type by value for that dimension, unless otherwise directed.

For example, if a facility is split by value 25/75 fixed interest rate and variable interest rate then one facility should be recorded (by number) in variable interest rate and none in fixed interest rate.

If a facility is split by value 50/50 across interest rate types or repayment types, then report the number of facilities as follows:

- interest rate type: default to variable interest rate; and
- repayment type: default to amortising.

1.15 Interest rates

The guiding principle in reporting interest rates is to report the contractual rate to be paid to or received by the customer/counterparty/debtholder. No fees should be included and no adjustment should be made for whether the payment/receipt actually occurred.

Reporting institutions are requested to report interest rates as annualised rates and not as a spread. That is, even if the reporting institution would typically consider that rate as a spread over a market rate, then the applicable market rate should be added to the spread when reporting the rate.

Reporting institutions are requested to report interest rates on foreign currency assets or liabilities as the contractual rate paid to or by the counterparty in that foreign currency. That is, no adjustments for hedging (such as cross-currency basis costs) should be incorporated in the rate reported.

Where there is more than one contractual rate, and the rate paid by the customer depends on their behaviour in that period, report the contractual rate that applied given their behaviour. For example, if a customer qualified for a bonus interest rate, then the rate reported for that account for that period should include the bonus interest rate.

The treatment of interest rates for credit cards (including charge cards) is specific:

- Because a credit card may charge interest in the month on only a portion of the balances outstanding, the treatment differs. The interest rate to be reported should be calculated as interest charged on credit cards during the month divided by the relevant balance × 100%. In the absence of further instructions, the relevant balance is the balance of credit card debt outstanding at the end of the month.
- In other cases, where specifically directed, the balance of credit card debt outstanding to be reported is total balances that accrued interest in the month. In this case, the interest rate reported would be the weighted average contractual rate for all balances that accrued interest in the month.
• When reporting credit cards funded during the month, the interest rate reported against the credit card limit funded should be zero unless a balance transfer has taken place (in which case, report the interest rate applying to this balance).

The treatment of interest rates for offset and set-off accounts is specific:

• The linked deposit and loan balances are, in the absence of specific instructions to the contrary, to be reported on a gross basis.
• Accordingly, the same (contractual) interest rate payable to or receivable by the customer on the net balance should be reported on both the loan and deposit amounts.

Example 1: mortgage offset account
Assume a housing loan offset account with an interest rate of 7 per cent charged on the net balance if the loan balance exceeds the deposit balance and an interest rate of 0 per cent if the deposit balance exceeds the loan balance.

If the loan balance exceeds the deposit balance then report the entire loan balance with an interest rate of 7 per cent and the entire deposit balance with an interest rate of 7 per cent.

If the deposit balance exceeds the loan balance then report the entire loan balance with an interest rate of 0 per cent and the entire deposit balance with an interest rate of 0 per cent.

Example 2: net balance
Assume linked business lending and deposit accounts with an interest rate of 16 per cent charged on the net balance if the total loan balance exceeds the total deposit balance and an interest rate of 3 per cent paid if the total deposit balance exceeds the total loan balance.

If the total loan balance exceeds the total deposit balance then report the total loan balance with an interest rate of 16 per cent and the total deposit balance with an interest rate of 16 per cent.

If the total deposit balance exceeds the total loan balance then report the total loan balance with an interest rate of 3 per cent and the total deposit balance with an interest rate of 3 per cent.

1.15.1 Calculating an annualised rate
Annualised rates may be calculated by simple multiplication or division of the relevant rate on a 365 days per year basis (no calculation of compound rates is required). Where market convention is to use an annualised rate other than 365 days, this annualised rate may be used instead.

Example 3
A bank has issued a fixed-rate bond that pays a semi-annual coupon of 3 per cent. To obtain the annualised rate on this funding, multiply the semi-annual rate of 3 per cent by 2 to obtain the annualised rate of 6 per cent.
1.15.2 Calculating a weighted average rate

The weighted average rate is the weighted sum of the individual rates where the weights used are the corresponding balances expressed as a share of the total balance for that category.

Weighted average rates may be calculated using the formula below.

\[
\text{Weighted average rate} = \sum_i \text{rate}_i \times \text{weight}_i
\]

Where weight, = the balance for item i divided by the sum of balances for all items i.

Example 4

A bank’s portfolio of business loans in a given industry sector consists of loans with the following characteristics:

<table>
<thead>
<tr>
<th>Loan Characteristic</th>
<th>Outstanding balance</th>
<th>Interest rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$50m</td>
<td>3%</td>
</tr>
<tr>
<td>2</td>
<td>$10m</td>
<td>5%</td>
</tr>
<tr>
<td>3</td>
<td>$40m</td>
<td>4%</td>
</tr>
</tbody>
</table>

The weighted average interest rate would be calculated as:

\[
3\% \times \frac{50}{100} + 5\% \times \frac{10}{100} + 4\% \times \frac{40}{100} = 3.6\%
\]

1.15.3 Cost/value of funds

The guiding principle in reporting the cost/value of funds is to report the rate to be charged or credited to the business unit.

Unless otherwise explicitly directed, the cost/value of funds is not to be expressed as a spread. That is, even if the reporting institution would typically consider that rate as a spread over a market rate, then the applicable market rate should be added to the spread when reporting the cost/value of funds.

The cost/value of funds for a foreign currency asset or liability should be reported on an AUD (or AUD equivalent) basis.

This cost/value of funds should include transfer pricing relating to:

- Interest rate risk managed centrally. This transfer price has the effect of reducing the exposure of the business unit to variability in the interest income it receives that arises from changes in interest rates (and transferring that exposure to the treasury). Accordingly, this transfer price may differ by product – where the characteristics of the
product expose it to different types of interest rate risk to other asset or liabilities (for example, because their interest rates may re-price on a different frequency or at the option of the customer).

- Liquidity risk managed centrally. This transfer price serves to attribute the costs of centrally managing liquidity risk. It may incorporate the cost of raising funding that matches the expected life of an asset, and other costs relating to the management of liquidity risk (including contingent liquidity risk) in line with APS 210.
- Strategic pricing determined by management. This transfer price is an overlay determined by management policy that is designed to influence the asset or liability composition of the balance sheet.

If the internal transfer prices calculated by your reporting institution contain components that do not fit in one of the categories above (or if they do not incorporate interest rate risk and/or liquidity risk transfer pricing), please contact APRA for further guidance.

PROXY: If, in reporting cost/value of funds, the ADI or RFC faces significant difficulties in providing accurate information by purpose, the agencies may consider allowing a proxy methodology involving allocation or apportionment based on product characteristics and/or other information. An ADI or RFC in this situation should seek reporting advice from APRA.

1.16 Treatment of fixed interest rate products once the fixed period ends

Finance (loans, finance leases and bill acceptances) with a fixed interest rate should be reported as having a fixed interest rate for the period that the fixed interest rate applies. When the fixed interest rate period ends, the finance should then be reported as having a variable interest rate (assuming that the customer has not entered into a new fixed interest rate period) from that point onwards.

Some fixed-term finance may contain provisions for the interest rate to be reset at regular short-term intervals over the term of the agreement (and remain fixed in the interim between resets). Such finance should be classified as having a variable interest rate.

Similarly, short-term debt instruments with any provision for regular changes in their interest rates are to be classified as having a variable interest rate (e.g. 9 month bill, with quarterly resets).

1.17 Residual maturity

1.17.1 Hybrid securities

The residual maturity of hybrid securities should be based on the period until the next call date.
1.18 Funds held on behalf of/in trust for clients

The *domestic books* definition does not consolidate funds management operations.

Any *deposits* with the *domestic books* entity (including those by funds management operations) should be reported on the ARF 720.0A/B, ARF 720.2A/B, ARF 720.3 and ARF 747.0A/B (as applicable). The sectoral classification should be based on the entity making the deposit, not on an ultimate risk basis.

*Example 1: funds manager deposits*

Consider the situation where a funds manager makes a *deposit* with a bank on behalf of a *household*. This should be reported by the bank as a *deposit* by a funds manager. If the funds manager is a *related party*, the *deposit* should be reported as an *intra-group* liability. If the funds manager is a *non-related party*, the *deposit* should be reported as a *deposit*.

1.19 Treatment of short-sold positions

Report *securities held for trading* and *securities not held for trading* by adjusting for the value of *short-sold positions* (that is, report the value of securities held less the value of securities sold short). Do not include unsettled trades. Where the *short-sold position* exceeds the asset position, the amount to be reported will be negative.

For example, a reporting entity may have a *trading book* comprised of the following positions:

- $1 million of purchased *equity securities*; and
- $100,000 of short sold *equity securities*

In this example, the amount to be reported for *securities held for trading* that are *equity securities* is $900,000.
2. Form-specific Guidance

2.1 ARF 720.0A/B: ABS/RBA Statement of Financial Position (Standard) / (Reduced)

2.1.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.12 Types of financial assets and liabilities;
- 1.16 Treatment of fixed interest rate products once the fixed period ends;
- 1.17 Residual maturity;
- 1.18 Funds held on behalf of/in trust for clients; and
- 1.19 Treatment of short-sold positions.

2.1.2 Foreign currency conversion

The general requirements of AASB 121 The Effects of Changes in Foreign Exchange Rates (AASB 121) for translation are:

1. translate foreign currency monetary items outstanding at the reporting date at the spot rate at the reporting date;\(^{16}\)
2. translate foreign currency non-monetary items that are measured at historical cost in a foreign currency using the exchange rate at the date of the transaction;\(^{17}\)
3. translate foreign currency non-monetary items that are measured at fair value at the exchange rate at the date when fair value was determined.

AASB 9 Financial Instruments (AASB 9) applies to many foreign currency derivatives. In addition, AASB 121 applies when an entity translates amounts relating to derivatives from its functional currency to its presentation currency. As foreign currency derivatives are measured at fair value at reporting date, they should be translated at the spot rate at the reporting date.

Translate equity items using the foreign currency exchange rate at the date of investment or acquisition. Post-acquisition changes in equity are required to be translated on the date of the movement.

* Monetary items are defined to mean units of currency held and assets and liabilities to be received or paid in a fixed or determinable number of units of currency. Spot rate means the exchange rate for immediate delivery.
* Examples of non-monetary items include amounts prepaid for goods and services (e.g. prepaid rent), goodwill, intangible assets, inventories, property, plant and equipment and provisions that are to be settled by the delivery of a non-monetary asset.
Exchange differences for monetary items arising from a foreign currency transaction are generally recognised in profit and loss in the period in which they arise. Exceptions include: a monetary item that is designated as a hedging instrument in a cash flow hedge; a hedge of a net investment; or a fair value hedge of an equity instrument for which an entity has elected to present changes in fair value in other comprehensive income. For these exceptions, the gain or loss that is presented in other comprehensive income (in accordance with AASB 9 requirements) includes any related foreign exchange component.

4. translate financial reports of foreign operations.

A foreign operation is defined in AASB 121 as meaning an entity that is a subsidiary, associated entity, joint venture entity or branch of a reporting entity, the activities of which are based or conducted in a country or currency other than those of the reporting entity.

Exchange differences relating to foreign currency monetary items that form part of the net investment of an entity in a foreign operation must be recognised as a separate component of equity.

Translation of financial reports should otherwise follow the requirements in AASB 121.

2.1.3 Treatment of foreign currency forwards/swaps with legs in different currencies

Each leg should be converted to AUD using the relevant spot rate per differing currency.

2.1.4 Treatment of repurchase agreements and securities lending

Transactions related to repurchase agreements (repos) and securities lending are to be recorded consistent with AASB 9.

Repos – General treatment
In a repo, the security [collateral] will remain as an asset on the balance sheet of the seller and is not derecognised, in accordance with AASB 9.

If the security is sold under repo in exchange for cash:

- the seller records an increase in assets (i.e. cash), and the purchaser records a decrease in assets (i.e. cash) as a result of the sale.
- the seller records a liability representing the payable due to the purchaser to reflect its obligation to return the cash once the purchaser returns the security (collateral) to the seller at the end of the transaction.
- The purchaser will record a corresponding asset representing the receivable due from the seller.
Securities lending – General treatment

In a securities loan, the security loaned will remain as an asset on the balance sheet of the lender and is not derecognised, in accordance with AASB 9. If the security is lent in exchange for cash collateral under a securities lending agreement:

- the lender records an increase in assets (i.e. cash), and the purchaser/borrower records a decrease in assets as a result of the loan.
- the lender records a liability representing the payable due to the borrower to reflect its obligation to return the cash collateral once the borrower returns the security to the lender at the end of the transaction.
- The borrower will record a corresponding asset representing the receivable due from the lender.

If the security is lent in exchange for non-cash collateral, then there is no impact on reporting for ARF 720.0A/B (the lender continues to recognise the securities on its balance sheet) except that, where the value of the security is reported in 'Item 3: Total securities held for trading' of ARF 720.0A, the value of that security should also be reported in 'Item 3.2: Total securities held for trading: of which: Securities lent or sold under repurchase agreements’ on ARF 720.

Example 1: Bank A sells securities to Bank B under a repurchase agreement (or lends them against cash collateral)

<table>
<thead>
<tr>
<th>Bank A (Seller)</th>
<th>Bank B (Purchaser)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Assets</strong></td>
<td><strong>Liabilities</strong></td>
</tr>
<tr>
<td>Securities</td>
<td>Payable due to Bank B</td>
</tr>
<tr>
<td>Proceeds from sale under repo / cash collateral from securities lending</td>
<td>less Value of funds transferred under repo / cash collateral under securities borrowing</td>
</tr>
<tr>
<td><strong>Assets</strong></td>
<td><strong>Liabilities</strong></td>
</tr>
<tr>
<td>Receivable due from Bank A</td>
<td></td>
</tr>
</tbody>
</table>

Reporting on ARF 720.0A/B for the Seller / Lender

Although the repo seller/securities lender continues to recognise the securities sold or lent as an asset, the reporting of the securities lent/sold under repo on ARF 720.0A/B will depend on whether the securities were issued by a related party or a non-related party. If the securities lent/sold under repo are issued by a related party, they should be reported under 'Item 12: Total intra-group assets’ on ARF 720.0A/B. If the securities lent/sold under repo are issued by a non-related party, they should be reported under ‘Item 3: Total securities held for trading’ against the appropriate security type on ARF 720.0A, or under ‘Item 3: Total debt securities’ or ‘Item 4: Total equity securities’ against the appropriate security type on ARF 720.0B. These securities should also be reported in 'Item 3.2: Total securities held for trading: of which: Securities lent or sold under repurchase agreements’ on ARF 720.0A.
Where applicable, the reporting of the liability representing the payable due to the purchaser/borrower of the securities in the books of the seller/lender will depend on whether the purchaser/borrower is a related party or a non-related party. If the purchaser/borrower is a non-related party, it should be reported under ‘Item 18.6: Payables related to securities lent under securities lending arrangements or sold under repurchase agreements’. If the purchaser/borrower is a related party, it should be reported under ‘Item 20: Total intra-group liabilities’.

If the securities were sold or lent against cash collateral, the seller should record the funds received under the relevant asset type e.g. cash.

**Reporting on ARF 720.0A/B for the Purchaser / Borrower**

The securities borrowed or purchased under repo should not be reported on ARF 720.0A/B.

Where applicable, the reporting of the asset representing the receivable due from the seller/lender of the securities will depend on whether the seller/lender is a related party or a non-related party. If the seller/lender is a non-related party, it should be reported under ‘Item 10.4: Receivables related to securities borrowed under securities lending arrangements or purchased under repurchase agreements’ on ARF 720.0A/B. If the seller/lender is a related party, it should be reported under ‘Item 12: Total intra-group assets’ on ARF 720.0A/B.

If the securities were purchased or borrowed against cash collateral, the purchaser should report a decline in funds under the relevant asset type e.g. cash.

**2.1.5 Treatment of securitisation**

**2.1.5.1 Special Purpose Vehicles**

SPVs are a separate legal entity to the ADI or RFC.

In the case of ADIs and RFCs that are a related party of an ADI, the following treatment applies.

- **SPVs** should not be consolidated within domestic books reporting.

- Any positions between the ADI or RFC and an SPV that is a related party will need to be recorded as an intra-group asset or liability.

- For any SPV that has been established for the purpose of holding assets in a cover pool for covered bonds, the securitised assets should be treated as on-balance sheet. That is, any assets in a cover pool that have been transferred to an SPV must not be derecognised from the domestic books balance sheet of the reporting entity. In addition, the covered bonds are issued by an ADI and should therefore be included as a debt security issued by that ADI for reporting purposes.

- For all other assets that have been transferred to an SPV for the purposes of securitisation, refer to the accounting standards to determine whether the securitised assets should be treated as on-balance sheet or off-balance sheet.
Note that, in contrast to reporting to APRA for prudential purposes, the EFS collection does not use the ‘securitisation deconsolidation principle’.

In the case of an RFC that are not a related party of an ADI, consolidate resident SPVs that are controlled entities for the purposes of domestic books reporting (see Section 1.4.4 Consolidation of SPVs by RFCs for more detail). All assets that have been originated by, or transferred to, a controlled SPV for the purposes of securitisation should therefore be treated as on-balance sheet securitised assets. Any intra-group positions and transactions between the RFC and these SPVs should not be reported.

**Example 1: Off-balance sheet securitisation (ADIs and RFCs that are related parties of ADIs)**

Step 1: a bank has some loans (or any other assets), that it would like to securitise.

Step 2: the bank sells the loans to the SPV. In this example, the purchase by the SPV is funded by a loan from the bank. However, this purchase could have also been funded in a number of other ways.

Step 3: the SPV creates securities backed by the loans. In this example, a portion of the securities issued by the SPV is purchased by the bank, and the remaining securities are purchased by other entities. The SPV uses the proceeds from the sale to repay the original loan from the bank.

Once the assets to be securitised have been sold to the SPV, they should no longer be reported on ARF 720.0A/B.

Any loans (or other funding) to an SPV that is a related party should be reported in ‘Item 12: Total intra-group assets’. These assets due from SPVs that are related parties should also be reported on ARF 720.3.

Any securities held that are issued by an SPV that is a related party should be recorded in ‘Item 12: Total intra-group assets’. These securities should also be reported on ARF 720.3 and either ARF 720.4 for debt securities or ARF 720.5 for equity securities. Asset-backed securities issued by an SPV that is a related party should be treated as debt securities, not intra-group loans.

**Step 1: Prior to securitisation**

Example 2: On-balance sheet securitisation

Step 1: a bank has some loans (or any other assets), that it would like to securitise.

Step 2: the bank sells the loans to the SPV. In this example, the purchase by the SPV is funded by a loan from the bank. However, this purchase could have also been funded in a number of other ways. Because the bank does not derecognise the loans but does notionally transfer them to the SPV, the bank records a liability equal to the value of the loans transferred to the SPV. The SPV records a corresponding asset representing the value of the loans transferred by the bank.

Step 3: the SPV creates securities backed by the loans.

Step 3A – Self-Securitisation: all of the securities issued by the SPV are purchased by the bank and the loan is extinguished.

Step 3B – Other on-balance sheet securitisation: in this example, a portion of the securities issued by the SPV are purchased by the bank, and the remaining securities are purchased by
other entities. The SPV uses the proceeds from the sale to repay a portion of the original loan from the bank.

The assets to be securitised that have been transferred to the SPV should be reported on ARF 720.0A/B against the relevant asset item. For example, loans to non-related parties should be reported in ‘Item 6: Total loans and finance leases’. These assets should also be reported in ‘Item 13.1: Total assets including intra-group assets: of which: Assets that have been securitised’ against the appropriate asset type.

The liability representing the value of loans that have been transferred should be reported in ‘Item 20: Total intra-group liabilities’. It should also be identified in ‘Item 20.1: of which: Liabilities to SPVs representing the value of assets transferred for securitisation’.

Any loans (or other funding) to an SPV that is a related party should be reported in ‘Item 12: Total intra-group assets’. These assets due from SPVs that are related parties should also be reported on ARF 720.3.

Any securities held that are issued by an SPV that is a related party should also be recorded in ‘Item 12: Total intra-group assets’. These securities held should also be reported on ARF 720.3 and either ARF 720.4 for debt securities or ARF 720.5 for equity securities. Asset-backed securities issued by an SPV that is a related party should be treated as debt securities, not intra-group loans.

</table>

### Example 3: On-balance sheet securitisation by an RFC that is not a related party of an ADI

Step 1: an RFC originates some loans that it would like to securitise.

Step 2: the RFC sells the loans to an SPV that is a controlled entity. In this example, the purchase by the SPV is funded by a loan from the RFC. Because the SPV is consolidated within the domestic books of the RFC:

- the assets to be securitised that have been transferred to the SPV continue to be reported on the domestic books balance sheet of the RFC; that is, the loans should be reported in 'Item 6: Total loans and finance leases' on ARF 720.0A/B.
- the loans should not be reported in 'Item 13.1: Total assets including intra-group assets: of which: Assets that have been securitised', 'Item 20: Total intra-group liabilities' or 'Item
20.1: *of which:* Liabilities to SPVs representing the value of assets transferred for securitisation.

- the RFC should not report the *intra-group loan* to the SPV.

Step 3: the SPV creates securities backed by the loans.

Step 4: in this example, a portion of the securities issued by the SPV are purchased by the RFC, and the remaining securities are purchased by other entities. The SPV uses the proceeds from the sale to repay a portion of the original loan from the RFC.

*Asset-backed securities* issued by an SPV that is a *controlled entity* should be treated as *debt securities* issued, and reported in 'Item 16.2: Debt securities’. These securities should also be reported on ARF 720.6. Any securities held by the RFC that are issued by an SPV that is a *controlled entity* should not be reported.

### 2.1.5.2 Assets in a cover pool for covered bonds

Even when assets inside a *covered bond collateral pool* are segregated into an SPV, the *covered bond* remains a direct obligation of the issuing ADI. Any assets held in a covered bond SPV must therefore not be derecognised from the *domestic books* balance sheet of the reporting entity. The cover pool assets should be reported on ARF 720.0A/B against the relevant asset item; for example, *loans to non-related parties* should be reported in 'Item 6: Total loans and finance leases’. These assets should also be reported in 'Item 13.1: Total assets including intra-group assets: *of which:* Assets that have been securitised’ against the appropriate asset type.

Since the *covered bonds* are issued by the ADI itself, they should be reported as a *debt security* issued by that ADI in 'Item 16.1: Total borrowings: debt securities’. These *debt securities* should also be reported on ARF 720.6.

Any *loans* or other funding to an SPV that is a *related party* should be reported in 'Item 12: Total intra-group assets’. These assets due from SPVs that are *related parties* should also be reported on ARF 720.3 against the appropriate institution type.

Because the ADI does not derecognise the cover pool assets but notionally transfers them to the SPV, it must also record a liability equal to the value of the assets transferred. This should be reported in 'Item 20: Total intra-group liabilities’.
2.1.6 Treatment of bills of exchange

Bills of exchange (bills) should only be reported on ARF 720.0A/B if they are held and/or accepted by your reporting institution. See the table below for the particular items on ARF 720.0A/B where these bills should be reported.

Bills that have been endorsed (and neither held or accepted by your reporting institution) should not be reported on ARF 720.0A/B.

<table>
<thead>
<tr>

<td>ARF 720.0A: Item 3: Total securities held for trading or Item 4: Total securities not held for trading</td>
<td>Not reported</td>
</tr>
<tr>
<td>Bills accepted but not held by your institution</td>
<td>Item 5: Net acceptances of customers This item represents a contra asset that reflects the ADI’s or RFC’s claim against each drawer of a bill of exchange (where the bill is held by a third party).</td>
<td>Item 15: Total acceptances This item represents the liability of the ADI or RFC to pay (to a third party) bills of exchange drawn on customers.</td>
</tr>
</tbody>
</table>

2.1.7 Treatment of margin monies

In the reporting of margin monies, a distinction should be made between ‘repayable’ and ‘non-repayable’ margin monies, where possible. This treatment is in line with the IMF’s Monetary and Financial Statistics Manual andCompilation Guide [2016], from which the following definitions have been drawn.
• **Repayable margin** – sometimes referred to as initial margin – consists of collateral deposited to protect a counterparty against default risk. Ownership of the margin remains with the unit that deposited it. Although its use may be restricted, a margin is classified as repayable if the depositor retains the risks and rewards of ownership, such as the receipt of income or exposure to holding gains and losses. At settlement, a repayable margin (or the amount of repayable margin in excess of any liability owed on the financial contract) is returned to the depositor. Repayable margin payments are transactions in deposits, not transactions in the associated financial assets (e.g. financial derivatives). Repayable margin deposits made in cash should be reported as ‘non-transaction deposits’. When a repayable margin deposit is made in a non-cash asset, no transaction or a new position in stocks is recorded in the balance sheets because no change in economic ownership has occurred.

• **Non-repayable margin** – sometimes referred to as variation margin – payments are transactions in financial derivatives, not deposits. Non-repayable margin is paid to meet liabilities recorded due to the daily marking of derivatives to market value. In effect, non-repayable margin represents an effective transfer of ownership between counterparties to the financial contract. The non-repayable margin payments reduce the liability created through the financial derivative with the contra-entry a reduction in another financial asset. The receipt of non-repayable margin is recorded as a reduction in the financial derivative asset; the contra-entry is an increase in another financial asset.

There may be instances where a reporting entity is unable to make the distinction between repayable and non-repayable margin monies. In these circumstances, treat all margin monies as repayable.

**2.1.8 Treatment of settlement account balances**

RBA Exchange Settlement Accounts and Nostro/Vostro accounts should be treated as ‘at call deposits’ and reported on the balance sheet accordingly.

Settlement account balances related to outstanding security settlements should be reported in:

- Item 10.5: Receivables related to securities sold not delivered / outstanding security settlements.
- Item 18.7: Payables related to securities purchased not delivered / outstanding security settlements.

Any other settlement account balances not related to outstanding security settlements (e.g. related to the payments system) should be reported in:

- Item 10: Total other assets (and will be captured in the derived Item 10.12 Other assets).
- Item 18: Total creditors and other liabilities (and will be captured in the derived Item 18.11 Other).
2.1.9 Treatment of interbank loans and deposits

Assets/liabilities arising from positions with other financial institutions (e.g. interbank assets/liabilities), should be treated no differently from assets/liabilities arising from positions with other types of counterparties. Report these positions based on the type of asset/liability, the residency and the related-party status of the financial institution.

2.1.10 Funds on deposit with other financial institutions

As a guide, any funds on deposit that are redeemable or withdrawable on demand may be considered to be ‘at call’. Funds on deposit that do not fit this description may be considered ‘not at call’ (e.g. funds with non-transaction deposit-like characteristics).

2.1.11 Section A: Assets

Note that the treatment of residents and non-residents in ARF 720.0A/B ‘Section A: Assets’ differs from the previous version of this form (ARF/RRF 320.0), where residents and non-residents were separately identified.

2.1.12 ARF 720.0A Item 3: Securities held for trading

In accordance with AASB 9, securities held for trading are measured at fair value through profit or loss.

In accordance with AASB 9, all investments in equity instruments and contracts on those instruments must be measured at fair value. However, in limited circumstances, cost may be an appropriate estimate of fair value. Cost is never the best estimate of fair value for investments in quoted equity instruments (or contracts on quoted equity instruments).

2.1.13 ARF 720.0A Item 4: Securities not held for trading

Securities not held for trading are securities that are not held for trading (these are reported in ARF 720.0A item 3: Securities held for trading).

2.1.14 ARF 720.0B Item 3: Total debt securities

Total debt securities include both debt securities that are held for trading and debt securities that are not held for trading.

2.1.15 ARF 720.0B Item 4: Total equity securities

Equity securities include both equities that are held for trading and equities that are not held for trading.

2.1.16 Item 10: Total other assets

Interest receivable

Item 10.1 requires institutions to report the interest that has accrued during the period but has not yet been received for interest-bearing assets.
This item should exclude the interest that has been received. Interest received should be included in the value of the relevant asset (such as loans or debt securities).

**PROXY:** If information on interest receivable (Item 10.1) split by loans and finance leases (Item 10.1.1) and securities and other interest-earning assets (Item 10.1.2) is not available, apportionment of total interest receivable based on interest received for these product types is acceptable.

**Derivative financial instruments**

Report all derivatives recognised and measured in accordance with requirements in the Australian Accounting Standards (e.g. AASB 132 Financial Instruments: Presentation [AASB 132], AASB 7 Financial Instruments: Disclosures [AASB 7] and AASB 9. Derivatives are categorised according to whether the reporting entity holds them in the trading book or the banking book.

**Fees and commissions receivable**

Item 10.11 requires institutions to report fees and commissions that have been earned during the period but not yet received.

This item should exclude fees and commissions that have been received. Fees and commissions received should be included in the value of the relevant asset (such as loans or debt securities).

**PROXY:** If information on fees and commissions receivable split by resident households (Item 10.11.1), resident non-financial businesses (Item 10.11.2) and resident financial institutions (Item 10.11.3) is not available, estimation or proxy methodology is acceptable, including using fees and commissions received by product to estimate the split between these sectors.

**Other assets (Item 10.12)**

Generally include:

- commodities other than unallocated gold;
- gold bullion (physical and allocated gold);
- valuables; and
- prepayments

**2.1.17 ARF 720.0A/0B Item 12: Total intra-group assets**

Item 12 collects information on the value of total assets due from related parties (intra-group assets). Investments in related parties should be reported in item 12, along with the total value of assets due from related parties.

**2.1.18 Section B: Liabilities**

Note that the treatment of residents and non-residents in ARF 720.0A/B, ‘Section B: Liabilities’ differs from the previous version of this form (ARF/RRF 320.0), where residents and non-residents were separately identified.
2.1.19 Item 14 Total deposits
Exclude treasury-related short and long-term borrowings from other ADIs. Report these in Item 16 as loans.

2.1.20 Item 16 Total borrowings
Include treasury-related short and long-term borrowings from other ADIs. Report these as loans.

2.1.21 Item 18: Total creditors and other liabilities
Interest payable
Item 18.4 requires institutions to report the interest that has accrued during the period, but not yet been paid on interest-bearing liabilities.

This item should exclude the interest that has been paid. Interest paid should be included in the value of the relevant liability (such as deposits, loans or debt securities).

PROXY: If information on interest payable [Item 18.4] split by debt securities [Item 18.4.1], deposits [Item 18.4.2], loans and finance leases [Item 18.4.3] and other liabilities [Item 18.4.4] is not available, apportionment of total interest payable based on interest paid on these product types would be acceptable.

Derivative financial liabilities
Report all derivatives recognised and measured in accordance with the requirements in the Australian Accounting Standards (e.g. AASB 132, AASB 7 and AASB 9). Derivatives are categorised according to whether the reporting entity holds them in the trading book or the banking book.

Other (ARF 720.0A Item 18.11 or ARF 720.0B Item 18.12)
Item 18.11 [ARF 720.0A] / 18.12 [ARF 720.0B] requires institutions to report fees and commissions that have been received during the period, but not yet earned. This item should exclude fees and commissions that have been earned. Fees and commissions earned should be included in the value of the relevant asset (such as deposits or debt securities).

PROXY: If information on fees and commissions received but not yet earned split by resident households [ARF 720.0A Item 18.11.1 / ARF 720.0B Item 18.12.1], resident non-financial businesses [ARF 720.0A Item 18.11.2 / ARF 720.0B Item 18.12.2] and resident financial institutions [ARF 720.0A Item 18.11.3 / ARF 720.0B Item 18.12.3] is not available, estimation or proxy methodology is acceptable, including using fees and commissions received by product to estimate the split between sectors.
2.2 ARF 720.1A/B: ABS/RBA Loans and Finance Leases (Standard) / (Reduced)

2.2.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.8 Identifying (predominant) purpose class and sub-class;
- 1.9 Residential property purpose - owner-occupied and investment housing;
- 1.10 Secured by residential property;
- 1.11 Location of property;
- 1.12 Types of financial assets and liabilities; and
- 1.16 Treatment of fixed interest rate products once the fixed period ends.

2.2.2 Treatment of securitisation

Refer to Section 2.1.5 Treatment of securitisation for guidance and examples of the treatment of securitisation.

SPVs should not be consolidated within domestic books. Any loans to SPVs that are related parties should be excluded from ARF 720.1A/B. These should be reported on ARF 720.3.

Reporting on ARF 720.1A/B: off-balance sheet securitisation

Once the assets to be securitised have been sold to the SPV and derecognised for accounting purposes, they should only be reported in 'Item 5: Outstanding principal balance of securitised loans and finance leases held off-balance sheet' on ARF 720.1A or 'Item 4: Outstanding principal balance of securitised loans and finance leases held off-balance sheet' on ARF 720.1B. These assets should be excluded from all other items on ARF 720.1A/B.

Reporting on ARF 720.1A/B: on-balance sheet securitisation

The assets to be securitised that have been transferred to the SPV but not derecognised for accounting purposes should be reported on ARF 720.1A/B in all items except in 'Item 5: Outstanding principal balance of securitised loans and finance leases held off-balance sheet' on ARF 720.1A or 'Item 4: Outstanding principal balance of securitised loans and finance leases held off-balance sheet' on ARF 720.1B. This applies to all assets that have been transferred to an SPV for the purposes of being held in a cover pool for covered bonds.
2.2.3 Item 1: Gross outstanding loans and finance leases – by counterparty, currency & residual maturity

Maturing in one year or less

Any loan or finance lease products that do not have a maturity date should be treated as having a residual maturity of greater than 12 months. These products should not be reported in column 3 of Item 1 on ARF 720.1A.

Individual provisions

PROXY: Where individual provisions are not available by counterparty or purpose, the counterparty and purpose splits may be apportioned based on the value of credit outstanding to each counterparty and purpose.

Collective provisions

PROXY: Where collective provisions are not available by counterparty or purpose, the counterparty and purpose splits may be apportioned based on the value of credit outstanding to each counterparty and purpose.

2.2.4 Item 3: Characteristics of business loan and finance leases

Syndicated loans

TRANSITIONAL PROXY: Where information on syndicated loans is not currently available, the reporting institution should use business-as-usual points of contact (e.g. annual reviews) prior to the commencement of reporting for the EFS Collection in 2019 to determine the correct categorisation applying to large business loans. Where no business-as-usual points of contact occur within this time period, the ADI or RFC may allocate based on an internal allocation methodology. This would be updated at the next business-as-usual point of contact with the counterparty.

2.2.5 Item 6: Loans and finance leases to residents – past due and impaired

Reporting of past due and impaired exposures should be consistent with the data reported in the Impaired Facilities Return (ARF 220.0 Impaired Facilities). ADIs are encouraged to revisit APS 220 and ARS 220.0 to ensure they operate in accordance with prudential reporting requirements.

Commercial property lending

PROXY: When reporting commercial property lending in this item, reporting institutions may use the total of the ‘Residential property construction’ and ‘Non-residential property construction’ industry categories defined in ARS 701.0 may be used as a proxy for commercial property lending.
2.3 ARF 720.2A/B: ABS/RBA Deposits (Standard) / (Reduced)

2.3.1 General guidance
Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.12 Types of financial assets and liabilities; and
- 1.16 Treatment of fixed interest rate products once the fixed period ends; and
- 1.18 Funds held on behalf of / in trust for clients.

2.3.2 Transaction vs non-transaction deposits

Example of instantaneous transfer to a linked account
A customer has an online savings account that cannot be used to directly make payments or transfers to any account other than their nominated linked account.

- If this linked account is a transaction deposit account (i.e. meets none of the criteria in the definition of a non-transaction deposit) with the same reporting institution as their online savings account and any funds transferred from the online savings account to the transaction deposit account are instantaneously available in the transaction deposit account, then the online savings account should be classified as a transaction deposit account.

- If this linked account is not a transaction deposit account (i.e. meets one or more of the criteria in the definition of a non-transaction deposit) or is with another institution such that there may be a delay between when the funds are available in the linked account or is with the same reporting institution but any funds transferred from the online savings account to the transaction deposit account are not typically instantaneously available in the transaction deposit account, then the online savings account should be classified as a non-transaction deposit account.

Examples of restrictions/penalties on number of withdrawals or transfers
A customer has an account that provides them with 10 free transactions per month, and charges a nominal fee (that approximates the cost of providing that transaction service) on any transactions above this limit.

- This account, provided it did not meet any of the other criteria listed above, would be considered a transaction deposit account as the fee would not be considered a penalty.

A customer has an account that provides them with unlimited free electronic transactions and charges a nominal fee (that approximates the cost of providing that transaction service) on cheque or over-the-counter transactions.
• This account, provided it did not meet any of the other criteria listed above, would be considered a transaction deposit account as the fees would not be considered a penalty (and, in addition, there is a fee-free transaction option).

A customer has an account that provides them with 10 free transactions per month, and charges a fee of $10 [that considerably exceeds the cost of providing that transaction service] on any transactions above this limit.

• This account would be considered a non-transaction deposit account as the fee would be considered a penalty.

A customer has an account that does not charge a fee for transactions, but that pays an extra 3 per cent bonus interest if the customer makes less than two withdrawals per month.

• This account would be considered a non-transaction deposit account as the fee would be considered a penalty.

Example of restrictions/penalties on early withdrawal/transfer of funds
A customer has a breakable term deposit. The customer may withdraw their funds immediately at any time, but would face a penalty of $50.

• This account would be considered a non-transaction deposit account as the fee for immediate withdrawal of funds would be considered a penalty.

2.3.3 Fixed-term deposits
Any deposit that provides a fixed date on which the funds are repayable should be treated as a fixed-term deposit.

If the fixed-term deposit is breakable – for example, the funds may be withdrawn prior to the fixed date after providing a notice of withdrawal [with or without a delay in receiving the funds] – the deposit should be treated as a fixed-term deposit until notice of withdrawal is provided.

Once a notice of withdrawal is provided:

• if there is a fixed date in the future on which the funds may be withdrawn (i.e. in 30 days) then the deposit should still be classified as a fixed-term deposit.
• if there is no fixed date in the future on which the funds may be withdrawn – i.e. they are available immediately or within a few days – then the deposit should no longer be classified as a fixed-term deposit [it should be classified as a transaction deposit or other non-transaction deposit as appropriate].

2.3.4 Rolling notice of withdrawal accounts
Deposit products without a fixed maturity date that offer redemption following a notice of withdrawal period [typically 30 days] should be classified as other non-transaction deposit accounts until notice of withdrawal is provided. Once notice of withdrawal is given:
if there is a fixed date in the future on which the funds may be withdrawn (i.e. in 30 days) then the deposit should be classified as a **fixed-term deposit**;

if there is no fixed date in the future on which the funds may be withdrawn – i.e. they are available immediately or within a few days – then the deposit should be classified as **transaction deposit** or **other non-transaction deposit** as appropriate.

### 2.4 ARF 720.3: ABS/RBA Intra-group Assets and Liabilities

#### 2.4.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.12 Types of financial assets and liabilities;
- 1.17 Residual maturity;
- 1.18 Funds held on behalf of / in trust for clients; and
- 1.19 Treatment of short-sold positions.

#### 2.4.2 Reporting by asset and liability type

For further detail on how to report by asset and liability type on ARF 720.3, refer to the instructions and guidance for ARF 720.0A. When applying ARF 720.0A instructions and guidance to ARF 720.3, ignore any instructions that state to exclude positions with **related parties** (intra-group assets or liabilities) or to include positions with **non-related parties**.

#### 2.4.3 Related party type

For Australian-owned **ADIs**, the sum of assets (or liabilities) due from (due to) their **overseas operations** (i.e. overseas branches and overseas-based banking operations) should correspond to the sum of items 2.1.2 and 2.1.3 [items 4.1.2 and 4.1.3].

For foreign-owned **ADIs** and **RFCs**, the value of assets (or liabilities) due from (due to) their **overseas operations** should correspond to the value reported in item 2.1.1 (item 4.1.1) for their **parent entity**.

Items 2.1.2, 2.1.3, 4.1.2 and 4.1.3 are not relevant for **RFCs**.

### 2.5 ARF 720.4: ABS/RBA Debt Securities Held

#### 2.5.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
1.2 Residency;
1.3 Related parties;
1.4 Domestic books consolidation;
1.5 Standard Economic Sector Classifications of Australia;
1.12 Types of financial assets and liabilities;
1.17 Residual maturity; and
1.19 Treatment of short-sold positions.

2.5.2 Valuation

Closing balances should be reported at market value effective at the reference date. Where denominated in foreign currency, market values of foreign currency should be converted to AUD at the spot rate effective as at the reference date.

PROXY: If market value is not available (i.e. when relevant observable market data does not exist), report fair value measured in accordance with AASB 13 Fair Value Measurement. Apply these valuation methods to all debt securities held.

Discounts or haircuts should not be subtracted from the value (for example, where securities are eligible for repo with the RBA).

2.5.3 State, territory and local government / central borrowing authorities

Particular care should be taken to determine whether debt securities that appear to be issued by State, Territory and local government are actually issued by central borrowing authorities. State central borrowing authorities have taken over almost all bond issuance for funding required by State, Territory and local governments. The Australian Capital Territory (ACT) general government is the only state or territory that issues securities directly.

2.5.4 Intra-group assets

Report all debt securities held, including holdings of debt securities issued by related parties that are not consolidated within domestic books.

2.5.5 Treatment of securitisation

Refer to Section 2.1.5 Treatment of securitisation for guidance and examples on the treatment of securitisation.

Securities held that are issued by SPVs that are related parties but are not consolidated within domestic books should be reported on this form.

Any securities issued by SPVs that are consolidated within domestic books should not be reported on this form. Instead, these securities should be reported on ARF 720.6 (see Section 1.4.4 Consolidation of SPVs by RFCs for further details on when SPVs should be consolidated).

2.5.6 Treatment of repurchase agreements and securities lending
Refer to Section 2.1.4 Treatment of repurchase agreements and securities lending for guidance and examples on the treatment of repurchase agreements (repos) and securities lending.

Securities lent or sold under repo should be reported on ARF 720.4 where they are recognised on the domestic books balance sheet.

Securities borrowed or purchased under repo should not be reported on ARF 720.4.

2.5.7 Asset-backed securities

Include all asset-backed securities that are held on the domestic books balance sheet that are issued by entities that are not consolidated within domestic books. These securities should be reported against the relevant maturity and counterparty types.

If the asset-backed securities are issued by SPVs that are owned by the reporting institution or the same parent as the reporting institution but are not consolidated within domestic books, these should also be reported as debt securities issued by related parties (Item 1.1 for short-term debt securities or Item 2.1 for long-term debt securities) and as asset-backed securities issued by related SPVs (Item 1.2.4.8.1 for short-term debt securities or Item 2.4.4.8.1 for long-term debt securities).

Asset-backed securities issued by entities that are consolidated within domestic books should not be reported on this form.

2.5.8 Reconciliation between ARF 720.4 and ARF 720.0A & ARF 720.3

The sum of short-term and long-term debt securities held reported on ARF 720.4 is equivalent to the sum of debt securities reported under securities held for trading and securities not held for trading on ARF 720.0A and debt securities reported under securities held for trading and securities not held for trading on ARF 720.3, apart from differences in valuation methodology. Values may not reconcile exactly because debt securities are reported at market value on ARF 720.4 and may be reported on a different basis on ARF 720.0A and ARF 720.3 (according to accounting treatment). See the table below for the specific items that should be equivalent, if it were not for the different valuation bases.

<table>
<thead>
<tr>
<th>Reconciliation between ARF 720.4 and ARF 720.0A &amp; ARF 720.3 if ARF 720.0A and ARF 720.3 were reported at market values</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>Plus</td>
</tr>
<tr>
<td>Item 2: Total long-term debt securities held – Column 1: Total</td>
</tr>
<tr>
<td>Plus</td>
</tr>
</tbody>
</table>
2.6 ARF 720.5: ABS/RBA Equity Securities Held

2.6.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.12 Types of financial assets and liabilities;
- 1.17 Residual maturity; and
- 1.19 Treatment of short-sold positions.

2.6.2 Valuation

Closing balances should be reported at market price effective at the reference date. Where denominated in foreign currency, market values of foreign currency should be converted to AUD at the spot rate effective as at the reference date.

PROXY: If market value is not available (i.e. when relevant observable market data does not exist), report at fair value measured in accordance with AASB 13 Fair Value Measurement.

2.6.3 Intra-group assets

All equity securities held should be reported, including holdings of shares and other equities issued by related parties.

2.6.4 Treatment of repurchase agreements and securities lending

Refer to Section 2.1.4 Treatment of repurchase agreements and securities lending for guidance and examples on the treatment of repurchase agreements (repos) and securities lending.

Securities lent or sold under repo should be reported on ARF 720.5 where they are recognised on the domestic books balance sheet.

Securities borrowed or purchased under repo should not be reported on ARF 720.5.
2.6.5 Reconciliation between ARF 720.5 and ARF 720.0A & ARF 720.3

The sum of equity securities held reported on ARF 720.5 is equivalent to the sum of equity securities reported under securities held for trading and securities not held for trading on ARF 720.0A and any securities held for trading and securities not held for trading on ARF 720.3, apart from differences in valuation methodology. Note that the values may not reconcile exactly because equity securities are reported at market value on ARF 720.5 and may be reported on a different basis on ARF 720.0A and ARF 720.3. See the table below for the specific items that should be equivalent, if it were not for the different valuation bases.
### Reconciliation between ARF 720.5 and ARF 720.0A & ARF 720.3

*if ARF 720.0A and ARF 720.3 were reported at market values*

---

#### 2.7 ARF 720.6: ABS/RBA Securities Issued

##### 2.7.1 General guidance

Applicable sections of general guidance include:

- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.12 Types of financial assets and liabilities; and
- 1.17 Residual maturity.

##### 2.7.2 Valuation

Closing balances should be reported at **market value** effective at the reference date. Where denominated in foreign currency, **market values** of foreign currency should be converted to AUD at the spot rate effective as at the reference date.

**PROXY:** If **market value** is not available (i.e. when relevant observable market data does not exist), report at fair value measured in accordance with AASB 13 Fair Value Measurement.
2.7.3 Treatment of securitisation

Refer to Section 2.1.5 Treatment of securitisation for guidance and examples of the treatment of securitisation.

2.7.4 Treatment of covered bonds

Irrespective of the use of an SPV for segregation of the assets in a covered bond collateral pool, covered bonds are considered to be issued by the ADI itself and should therefore be included as a debt security issued by that ADI for reporting purposes.

2.7.5 Bills of exchange

Bills of exchange reported in items 1.1.1 and 1.2.1 should be bills of exchange drawn on the reporting institution. Do not report acceptances of bills of exchange drawn on other entities.

2.7.6 Asset-backed securities

Include any asset-backed securities that are issued by entities that are consolidated within domestic books.

This means that ADIs and RFCs that are a related party of an ADI should not include asset-backed securities that are issued by related party SPVs, except for any SPVs that have been established for the purpose of holding assets in a cover pool for covered bonds.

RFCs that are not a related party of an ADI should include asset-backed securities issued by SPVs that are consolidated within domestic books on this form (see Section 1.4.4 Consolidation of SPVs by RFCs).

2.7.7 Reconciliation between ARF 720.6 and ARF 720.0A & ARF 720.3

The sum of short-term debt securities excluding hybrids and long-term debt securities excluding hybrids and hybrid securities treated as liabilities issued on ARF 720.6 are equivalent to the sum of short-term debt securities and long-term debt securities issued on ARF 720.0A and debt securities issued on ARF 720.3, apart from differences in valuation methodology. Note that the values may not reconcile exactly because securities issued are reported at market value on ARF 720.6 and may be reported on a different basis on ARF 720.0A and ARF 720.3. See the table below for the specific items that should be equivalent, if it were not for the different valuation bases.
Reconciliation between ARF 720.6 and ARF 720.0A & ARF 720.3

_if ARF 720.0A and ARF 720.3 were reported at market values_

<table>
<thead>
<tr>
<th>ARF 720.6</th>
<th>ARF 720.0A &amp; ARF 720.3</th>
</tr>
</thead>
</table>

2.8 ARF 720.7: ABS/RBA Bill Acceptances and Endorsements

2.8.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia; and
- 1.12 Types of financial assets and liabilities.

2.8.2 Valuation

Closing balances should be reported at market value effective at the reference date. Where denominated in foreign currency, market values of foreign currency should be converted to AUD at the spot rate effective as at the reference date.
2.9 ARF 721.0A/B: ABS/RBA Repurchase Agreements and Securities Lending (Option A) / (Option B)

2.9.1 General guidance
Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia; and
- 1.12 Types of financial assets and liabilities.

2.9.2 Option A vs Option B
If a reporting institution is indifferent between options, reporting of Option A is preferred.

However, if it is more difficult or costly for an ADI or RFC to report on Option A than Option B, then the ADI or RFC may select to report on Option B instead.

To switch between reporting on Option A and Option B, the ADI or RFC is requested to notify APRA in advance. Switching between reporting on Option A and Option B should occur infrequently (i.e. switching should not occur more frequently than once a year).

2.9.3 Valuation
Closing balances should be reported at market value effective at the reference date. Where denominated in foreign currency, market values of foreign currency should be converted to AUD at the spot rate effective as at the reference date.

If market value is not available (i.e. when relevant observable market data does not exist), report at fair value measured in accordance with AASB 13 Fair Value Measurement.

2.9.4 Exchange-Traded Funds (ETFs)
PROXY: Where exchange-traded funds are not separately identifiable from other non-money-market financial investment funds, these may be estimated using an appropriate proxy or apportionment method.

2.9.5 Haircut
The haircut may be reported as the haircut applied at the origination of the transaction.

2.9.6 Collateral
The value and characteristics of collateral reported should typically include that relating to the initial value of collateral provided, adjusted for any change in the value and/or characteristics of collateral provided due to changes in market valuations and/or the addition of further collateral due under marging arrangements.

PROXY: If the reporting institution is unable to provide the required information on the value and/or characteristics of additional collateral provided under marging arrangements – for example, because this information is not available at the trade level – these values may be excluded from reporting.

2.9.7 Repo rate

In calculating the repo rate, reporting institutions are requested to use 365 days as the number of days in a year, consistent with the Australian Financial Markets Association (AFMA) repo conventions and the Australian Office of Financial Management (AOFM) pricing formulae.

2.10 ARF 722.0: ABS/RBA Derivatives

ARF 722.0 is not yet finalised and this section has been removed pending further consultation on the content and implementation of derivatives reporting.

2.11 ARF 723.0: ABS/RBA Margin Lending

2.11.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.12 Types of financial assets and liabilities;
- 1.13 Borrower-accepted commitments;
- 1.15 Interest rates; and
- 1.16 Treatment of fixed interest rate products once the fixed period ends.

2.11.2 Linked collateral and deposit accounts

Linked collateral and deposit accounts should be excluded from the value of credit outstanding for margin lending (i.e. do not subtract the value in the accounts from the outstanding value of the lending facility).

2.11.3 Item 1: New borrower-accepted margin loan commitments – by interest rate type
For *internal refinancing commitments* report the total value of the new *borrower-accepted commitment*.

### 2.11.4 Item 2: Margin loans – by number of customers and loans

**Example 1: customer with 1 margin loan with $50,000 credit outstanding**

<table>

</thead>
<tbody>
<tr>
<td>Number (1)</td>
<td>Number (2)</td>
<td>(3)</td>
</tr>
<tr>
<td>1.1. Total margin lending to residents</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>1.1.1. <em>of which:</em> Credit outstanding</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>
Example 4: customer with 2 margin loans – one with $50,000 credit outstanding and one with a net-deposit balance of $10,000

<table>
<thead>
<tr>
<th>Number (1)</th>
<th>Number (2)</th>
<th>Value (3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1. Total margin lending to residents</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>1.1.1. of which: Credit outstanding</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>

2.11.5 Item 3: Credit limits on margin loans to residents

The credit limit for margin lending should reflect the maximum that the borrower can draw down based on the notional credit limit in the loan contract and the loan conditions (such as the maximum allowable loan-to-valuation ratio). The credit limit reported should always be the lower of these limits.

The credit limit for margin lending can be equal to or lower than the credit limit in the loan contract. The credit limit cannot be higher than the credit limit in the loan contract.

Example 1

A borrower has a margin loan. The loan conditions state the notional credit limit is $100,000 and the maximum loan-to-valuation ratio is 60%. The borrower has $200,000 worth of collateral against this loan.

In this example, the borrower has enough collateral to draw down the entire value of the loan without breaching the maximum loan-to-valuation ratio. The credit limit reported will be equal to the credit limit in the loan contract ($100,000).

Example 2

A borrower has a margin loan. The loan conditions state the notional credit limit is $100,000 and the maximum loan-to-valuation ratio is 60%. The borrower has $100,000 worth of collateral against this loan.

In this example, the borrower does not have enough collateral to draw down the entire value of the loan without breaching the maximum loan-to-valuation ratio. The credit limit reported will be lower than the credit limit in the loan contract ($60,000).

Item 10: Security underlying margin loans outstanding to residents – largest 10 exposures to listed companies (by market capitalisation)

The value of market capitalisation of a company should be obtained from an appropriate third-party source.
2.11.6 Reconciliation between ARF 723.0 and ARF 741.0 & ARF 745.0

Item 1.1 New borrower-accepted margin loan commitments to residents during the quarter

Total new **commitments** for *margin loans* to *residents* reported in item 1.1 on ARF 723.0 should be equivalent to the sum of **commitments** for *margin lending* reported on ARF 741.0 and ARF 745.0, apart from differences in the reporting periods. ARF 723.0 is reported quarterly while ARF 741.0 and ARF 745.0 are reported monthly, thus the sum of the monthly values reported on ARF 741.0 and ARF 745.0 during the quarter, should equal the values reported on ARF 723.0 for the same quarter. See the table below for the specific items that should be equivalent, if it were not for the different reporting periods.

<table>
<thead>
<tr>
<th>Reconciliation between ARF 723.0 and ARF 741.0 &amp; ARF 745.0 where an ADI or RFC reports all relevant forms</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ARF 723.0</strong></td>
</tr>
<tr>
<td>Item 1.1: Total new borrower-accepted margin loan commitments to residents during the quarter – Column 1: Value</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

2.11.7 Reconciliation between ARF 723.0 and ARF 742.0A/0B

Item 4 Margin loans outstanding to residents by counterparty & type of margin loan

The total number of **margin loans** outstanding to **residents** reported in item 4 (column 3) on ARF 723.0 should be equivalent to the total number of **margin lending facilities** outstanding for all business types reported in item 3 (column 4) on either ARF 742.0A or ARF 742.0B, whichever is applicable, where there is a one-for-one relationship between the number of **margin loans** and the number of **margin lending facilities**. If there are some **margin loans** that may be aggregated in accordance with the definition of a **facility**, then the total number of **margin lending facilities** outstanding will be less than the total number of **margin loans** outstanding.
Reconciliation between ARF 723.0 and ARF 742.0A/ARF 742.0B

where an ADI or RFC reports all relevant forms

<table>
<thead>
<tr>
<th>ARF 723.0</th>
<th>ARF 742.0A or ARF 742.0B</th>

<td>Item 3 on ARF 742.0A or ARF 742.0B, whichever is applicable: Margin lending credit outstanding for all business types – Column 4: Number of facilities When no margin loans meet the definition of a lending facility.</td>
</tr>
</tbody>
</table>

2.12 ARF 730.0: ABS/RBA Statement of Financial Performance

2.12.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.8 Identifying [predominant] purpose class and sub-class;
- 1.9 Residential property purpose - owner-occupied and investment housing;
- 1.12 Types of financial assets and liabilities; and
- 1.18 Funds held on behalf of / in trust for clients.

2.12.2 Finance lease income

A finance lease refers to the leasing or hiring of tangible assets under an agreement that transfers from the lessor to the lessee substantially all the risks and benefits incident to ownership of the assets, without transferring the legal ownership.

Income earned from a finance lease should be recorded as interest income. Treatment of finance leases should be in accordance with AASB 117 Leases (AASB 117).

2.12.3 Operating lease income

An operating lease is a lease under which the lessor effectively retains substantially all the risks and benefits incident to ownership of the leased asset. An operating lease is a lease other than a finance lease.
Income earned on operating leases should be recorded as non-interest income. Treatment of operating leases should be in accordance with AASB 16.

2.12.4 Item 1: Interest income

ADIs and RFCs are to report interest income from both residents and non-residents; and from both related parties and non-related parties.

Interest income on notes and coins

Notes and coins represent holdings of physical currency. Some reporting institutions may receive interest income on the working balance of notes held under cash distribution arrangements. For most reporting institutions, reporting a zero value for this item would be valid.

Allocating interest income by financial instrument – using ARF 330.1

PROXY: For ADIs, it may be useful to initially split the total domestic book interest income earned into instruments categories as described in the instructions for Reporting Form ARF 330.1.L: Interest Income and Interest Expense [Licensed ADI] (ARF 330.1.L) – see Table 1 below.

Note that for RFCs, Reporting Form RRF 331.0: Selected Revenue and Expense (RRF 331.0) only categorises interest income by debt securities and housing loans. RFCs may instead use the methodology based on the balance sheet forms to allocate total interest income earned by financial instruments (see Table 2 below).
### Table 1: Map of Interest Income from ARF 330.1.L to ARF 730.0

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Example 1: Allocating interest income – short and long term debt securities

The method outlined in steps (a) to (f) illustrates a possible way to allocate interest income earned to short-term and long-term securities utilising information from ARF 330.1.L and the balance sheet forms.

a) split the domestic book total income from interest earning assets (Item 1.1 of ARF 730.0) into instrument categories by apportioning using the values reported on ARF 330.1.L as a proxy.

b) calculate an indicator quarterly market interest rate, for short-term and long-term debt securities from the RBA Statistical Tables F1, F2 and F3 or from internal indicator rates within your reporting institution.

c) for each type of short-term debt security held at the end of the reporting period (Item 1 of ARF 720.4) multiply by the indicator market interest rate determined in step (b) to obtain an estimate of interest income by type of short-term debt security. Aggregate the interest income to calculate total interest income earned for short-term debt securities.
d) for each type of long-term debt security held at the end of the reporting period (Item 2 of ARF 720.4) multiply by the indicator market interest rate determined in step (b) to obtain an estimate of interest income by type of long-term debt security. Aggregate the interest income to calculate total interest income earned for long-term debt securities.

e) pro-rate the total interest income allocated to short-term and long-term debt securities [step (a)] by interest income derived in step (c) for short-term securities.

f) pro-rate the total interest income allocated to short-term and long-term debt securities [step (a)] by interest income derived in step (d) for long-term securities.

Loans and finance leases interest income by counterparty

It is acknowledged that reporting of counterparty information required for interest income earned from loans and finance leases may be a challenge for some ADIs and RFCs as the reporting system for obtaining financial performance information is designed around business units [customer segmentation] and product classifications within these units.

Table 3 maps the four counterparty sectors to an indicative set of ADI/RFC business units.

Table 3: Map of ARF 730 counterparties for loans and finance leases to ADI/RFC Business Units

<table>
<thead>
<tr>
<th>ARF 730.0- Counterparty</th>
<th>ADI/RFC Business Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Households</td>
<td>Retail/Consumer/Personal</td>
</tr>
<tr>
<td>Private unincorporated businesses</td>
<td>Micro and Small Business</td>
</tr>
<tr>
<td>Other private non-financial corporations</td>
<td>Medium &amp; Large Business/Corporate/Institutional</td>
</tr>
<tr>
<td>Other</td>
<td>Large Business/Corporate/Institutional</td>
</tr>
</tbody>
</table>

(a) Households

Table 3 indicates that interest income earned from households on loans and finance leases should map directly to the interest income generated from retail/consumer/personal business units.

PROXY: ARF 730.0 requires a further breakdown of interest income earned from households to the categories shown in Table 4. These categories may be estimated using product type. ADIs/RFCs may therefore be able to allocate the interest income earned to housing (owner-occupied and investment), and personal (credit cards and other) by using loan product information within the business unit related to households.
### Table 4: Map of ARF 730 Sectors to ADI/RFC Business Units/Products

<table>
<thead>
<tr>
<th>ARF 730.0 - Household - Counterparty</th>
<th>Business Units / Products</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>• Owner-occupied</td>
<td>• Owner-occupied home loans</td>
</tr>
<tr>
<td>• Investment</td>
<td>• Investor home loans</td>
</tr>
<tr>
<td><strong>Personal loans</strong></td>
<td>Personal loan products</td>
</tr>
<tr>
<td>• Credit cards</td>
<td>• Credit card products</td>
</tr>
<tr>
<td>• Other</td>
<td>• Other products</td>
</tr>
</tbody>
</table>

**PROXY:** If ADIs/RFCs are unable to allocate interest income earned for housing and personal by using loan product information, ADIs/RFCs may estimate this information using information from ARF 720.1A/B and indicator interest rates (similar to the method used for deposits in Example 2: Interest expense – deposits accounts in Section 2.12.5 Item 4: Interest expense).

Indicator interest rates may be calculated as follows:

- For owner-occupier and investor housing, calculate the quarterly interest rate information from Item 1 on ARF 744.0A/B. If ARF 744.0A/B is not reported by your reporting institution, use interest rate information from internal indicator rates within your reporting institution.
- For personal, calculate the quarterly interest rates using interest rate information from Item 1 on ARF 746.0A/B. If ARF 746.0A/B is not reported by your reporting institution, use interest rate information from internal indicator rates within your reporting institution.

(b) Private unincorporated businesses

Table 3 indicates that interest income earned from private unincorporated business on loans and finance leases should map directly to the interest income generated by micro and small business units.

**PROXY:** For ADIs/RFCs that are not able to identify small business customers into a separate business units, small business customers may be identified by an ADI’s/RFC’s internal business indicators such as annual turnover and debt exposure, revenue, total lending limits, business lending limits and/or through product information. See Section 1.7 Business Size for further guidance.

**PROXY:** If ADIs/RFCs are unable to allocate interest income earned for private unincorporated businesses using loan product information, ADIs/RFCs may estimate this information using information from ARF 720.1A/B and indicator interest rates (similar to the method used for deposits in Example 2: Interest expense – deposits accounts in Section 2.12.5 Item 4: Interest expense). Indicator interest rates may be calculated using internal indicator rates within your reporting institution.
(c) Private non-financial corporations and other

Table 3 indicates that interest income earned from other private non-financial corporations and the ‘other’ counterparty sectors on loans and finance leases would both map to interest income generated by large business/corporate/institutional business units. Interest income generated from medium size businesses would map directly to other private non-financial corporations.

The ‘other’ counterparty includes financial institutions, public sector units, community service organisations and property trusts. In general, it is expected that ADIs and RFCs do not provide significant amounts of loans and finance leases to entities included in the ‘other’ category. The majority of the loans and finance leases – and therefore the interest income earned – from large businesses (in the Corporate/Institutional business units) are expected to be earned by providing loans and finance leases to other private non-financial corporations.

ADIs/RFCs may find it difficult to distinguish between the interest income earned for the ‘other’ and other private non-financial corporations. If possible:

- **PROXY**: ADIs and RFCs are encouraged to identify the entities that fall into the ‘other’ category as described above, estimate their interest income earned and derive, as a residual, interest income earned from other private non-financial corporations; or
- **PROXY**: estimate interest income earned for the two categories using information on ARF 720.1A/B and internal indicator interest rates used within your reporting institution (similar to the method used for deposits in Example 2: Interest expense – deposits accounts in Section 2.12.5 Item 4: Interest expense).

### 2.12.5 Item 4: Interest expense

**ADIs** and **RFCs** should report interest expense incurred from both residents and non-residents; and from related parties and non-related parties. Interest expense incurred is not separately identified for non-residents nor related parties; instead they are included in the total and instrument splits.

**Allocating interest expense by financial instrument**

**PROXY**: **ADIs** may find it useful to initially split the total domestic book interest expense incurred into instrument categories described in the instructions for ARF 330.1.L. The categories are:

- deposits;
- other borrowings;
- derivatives - banking book;
- bonds, notes and long-term borrowings;
- loan capital;
- loans from parent entity, controlled entities and associates/joint ventures; and
- other interest-bearing liabilities.

The current reporting standard for **RFCs** RRF 331.0 only categorises interest expense by debt securities on issue and ‘other’. **RFCs** may use the methodology illustrated in Example 1 above to allocate total interest expense by financial instruments based on ARF 730.0 (see Table 6).
Table 5 below provides a concordance map from the current ARF 330.1.L to ARF 730.0.

**Table 5: Map of Interest Expense from ARF 330.1.L to ARF 730.0**

<table>
<thead>
<tr>

</tr>
<tr>
<td>Loans from associates / joint ventures (PL02556)</td>
<td></td>
</tr>
</tbody>
</table>

**PROXY**: The categories of *interest-bearing* liabilities from the *domestic books* balance sheet forms (ARF 720.0A/B, ARF 720.2A/B, ARF 720.3 and ARF 720.6) along with an indicator interest rate may be used to allocate and or validate the *interest expense incurred* by financial instrument categories required on ARF 730.0 [similar to the methods used in Example 1: Allocating Interest Income – short and long term debt securities and Example 2: Interest expense – deposits accounts].

Indicator interest rates may be calculated using interest rate information from Item 1 on ARF 747.0A/B and ARF 748.0A/B. If ARF 747.0A/B and ARF 748.0A/B are not reported by your reporting institution, use interest rate information from RBA Statistical table F1 and F3, and/or internal indicator rates within your reporting institution.

Table 6 provides a map of the *interest expense incurred* by financial instrument from ARF 730.0 to the corresponding balance sheet items on ARF 720.0A/B, ARF 720.2A/B, ARF 720.3 and ARF 720.6.
Table 6: Map of Interest Expense from ARF 730.0 to the corresponding items on balance sheet forms

<td>ARF 720.6: Item 1: Total short-term debt securities excluding hybrids – Column 1: AUD and ARF 720.6: Item 1: Total short-term debt securities excluding hybrids – Column 2: FX (AUD equivalent)</td>
</tr>
<tr>
<td><strong>Item 4.1.3: Long-term debt securities – Column 1: Interest expense</strong></td>
<td>ARF 720.6: Item 2: Total long-term debt securities excluding hybrids – Column 1: AUD and ARF 720.6: Item 2: Total long-term debt securities excluding hybrids – Column 2: FX (AUD equivalent)</td>
</tr>
<tr>
<td><strong>Item 4.1.4: Loans and finance leases – Column 1: Interest expense</strong></td>
<td>ARF 720.0A/B: Item 16.3: Loans and finance leases – Column 1: Short-term and ARF 720.0A/B: Item 16.3: Loans and finance leases – Column 1: Long-term and ARF 720.3: Item 3.1.3.2: Loans and finance leases – Column 1: Total</td>
</tr>
<tr>
<td><strong>Item 4.1.5: Derivatives: banking book hedging – Column 1: Interest expense</strong></td>
<td>ARF 720.0A/B: Item 18.8.2: Banking book derivatives – Column 1: Total</td>
</tr>
</tbody>
</table>

**PROXY**: Similar methodology to that illustrated in Example 1 above may be used to allocate interest expense by financial instrument using information from ARF 330.1.L, ARF 720.0A/B and the supplementary balance sheet forms.

**Deposits interest expense by counterparty**

It is acknowledged that reporting of counterparty information required for *deposit interest expense incurred* will be a challenge for *ADIs/RFCs* as the reporting system for obtaining financial performance information is designed around business units (customer segmentation) and the product classifications within these units.
Table 7 maps the four counterparty sectors to an indicative set of ADI/RFC business units.

Table 7: Map of ARF 730 counterparties for deposit accounts to ADI Business Units

<table>
<thead>
<tr>
<th>ARF 730.0 - Counterparty</th>
<th>ADI Business Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Households</td>
<td>Retail/Consumer/ Personal</td>
</tr>
<tr>
<td>Other private non-financial corporations</td>
<td>Medium &amp; Large Business/ Corporate/Institutional</td>
</tr>
<tr>
<td>Self-managed superannuation funds</td>
<td>Retail/Consumer/ Personal</td>
</tr>
<tr>
<td>Other</td>
<td>Large Business/ Corporate/Institutional</td>
</tr>
</tbody>
</table>

Table 7 indicates that there is not a one-to-one relationship between the counterparties required for deposit accounts in ARF 730.0 and business units. ADIs/RFCs may find it difficult to allocate interest expense incurred from deposit accounts to these counterparties. Example 2 below provides a suggested allocation methodology.

Example 2: Interest expense – deposit accounts

PROXY: Steps (a) to (e) in the example below illustrate how to allocate interest expense incurred for deposit accounts using information from ARF 330.1.L, ARF 720.0A/B and supplementary forms [see Table 5 and Table 6 above].

a) Split the domestic book total expense from interest-bearing liabilities (Item 4.1 of ARF 730.0) into instrument categories by using the splits in ARF 331.0.L as a proxy to obtain the amount of interest expense incurred allocated to deposits;
b) Derive the balances for deposit accounts from Item 1 of ARF 720.2A/B and use a quarterly indicator interest rate for the categories below:
   - households;
   - self-managed superannuation funds;
   - other private non-financial corporations; and
   - other (total deposits account balances less the 3 categories above).
c) Calculate a quarterly indicator interest rate, for the relevant categories using interest rate information from Item 1 from ARF 747.0A/B. If ARF747.0 A/B is not reported by your reporting institution, this can be calculated using internal indicator rates within your reporting institution.
d) Derive interest expense estimates for households and self-managed superannuation funds on ARF 730.0. Pro-rate the total interest expense obtained for the deposit products for the Retail/Consumer/Personal business unit by the derived interest expense estimates for households and self-managed superannuation funds.
e) Derive interest expense estimates for other private non-financial corporations and the ‘other’ category on ARF 730.0. Pro-rate the total interest expense (obtained for the deposit products for the Medium & Large Business/Corporate/Institutional business unit) by the derived interest expense estimates for private non-financial corporations and ‘other’.
2.12.6 Item 5: Personnel expense

Employer contributions into superannuation

Follow accrual accounting practices when reporting employer contributions made by employers on behalf of employees into superannuation funds. For example, imputation may be required if the fund is overfunded (and the employer is on a contribution holiday) or the fund is an unfunded, defined benefit scheme and therefore needs to ensure a level of contributions consistent with the actuarial recommendations.

2.12.7 Item 8: Other operating expense

Fees and commissions – of which: financial institutions

Reporting institutions are requested to report any fees and commissions paid to financial institutions (including related parties).

This item includes (but is not limited to) fees paid by the reporting institution to other financial institutions for:

- servicing a loan;
- investment management fees;
- loan syndication fees; and
- underwriting fees.

Exclude fees and commissions already accounted for in interest expense incurred because they are an integral part of the effective interest rate of a financial instrument, in accordance with Australian Accounting Standards.

Note that the treatment of fees on ARF 730.0 is different to the reporting of fees on ARF 730.1. On ARF 730.1, all fees are included regardless of whether they can be treated as interest expense under the accounting standards.

2.12.8 Item 15: Multi-state operations

As ARF 730.0 is to be completed on a domestic books basis, only the wages and salaries of persons paid by entities that are consolidated within domestic books should be reported.

If an employee is based outside of Australia, but their wage is an expense of the domestic book of the ADI or RFC, report the employee’s wage in accordance with the location of the business cost centre responsible for paying the employee’s wage.

2.12.9 Item 16: Employment

Number of employees working for this business

As ARF 730.0 is to be completed on a domestic books basis, only the number of persons working in entities that are consolidated within domestic books should be reported.
If an employee is based outside Australia, but is deemed to be employee of an entity consolidated within the domestic books of the ADI/RFC, then they should be reported on this form. If not, they should be excluded from ARF 730.0 entirely.

2.13 ARF 730.1: ABS/RBA Fees Charged

2.13.1 General guidance
Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.7 Business size;
- 1.8 Identifying (predominant) purpose class and sub-class; and
- 1.12 Types of financial assets and liabilities.

2.13.2 Reporting basis
Note that the treatment of fees is on ARF 730.1 is different to the reporting of fees on ARF 730.0. On ARF 730.1, unless explicitly excluded, all fees should be reported regardless of whether they can be treated as interest expense under the accounting standards.

As per the form name, the primary focus is on quantifying fees charged to customers (net of any rebates exemptions or waivers offered to the customer), not the reporting institution’s perception of income derived from fees charged which may or may not involve further netting of various expenses incurred by the reporting institution. As such, fees charged will not necessarily reconcile with non-interest income reported in the reporting institution’s annual profit and loss financial statements compiled in accordance with accounting standards.

2.13.3 Reporting coverage
Any fee income earned from fees charged to related parties are outside the scope of this form. Accordingly, fee income from fees charged to SPVs that are related parties should not be included on this form. Fee income from fees charged to SPVs that are non-related parties should be included under the relevant item.

Any fee income earned from fees charged to a custody business should not be included on the form if that custody business falls outside the scope of domestic books.

2.13.4 Counterparty splits
PROXY: Where information on fees charged is not available by counterparty type, the ADI may use an appropriate allocation method to split fees charged across counterparties.
2.13.5 Item 1: Fees charged on deposit accounts

Do not include fees on overdrawn accounts with a pre-arranged overdraft facility. These fees should be included in loan fees charged. Fees should be included for accounts that do not have pre-arranged overdraft facilities, such that they attract penalty interest rates if they become overdrawn, but do not include the penalty interest charged for becoming overdrawn without authorisation.

2.13.6 Item 2: Fees charged on loans and finance leases

Include fees on overdrawn accounts with a pre-arranged overdraft facility.

Include fees on loans and finance leases that have been securitised and where the loans and finance leases are held on-balance sheet. Refer to Section 2.1.5 Treatment of securitisation for more detail on the treatment of securitisation.

Fees charged on personal loans and finance leases should include fees associated with margin lending to households. Do not include merchant service fees or transaction fees for debit cards. Merchant service fees are included in merchant fees charged to private and public sector businesses. Debit card transaction and account keeping fees should be included in fees charged on deposit accounts.

2.14 ARF 741.0: ABS/RBA Business Finance

2.14.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.6 Australian and New Zealand Standard Industry Classification;
- 1.7 Business size;
- 1.8 Identifying [predominant] purpose class and sub-class;
- 1.11 Location of property;
- 1.12 Types of financial assets and liabilities; and
- 1.13 Borrower-accepted commitments.

2.14.2 Borrower-accepted commitments for business finance

Generally include:

- secured and unsecured finance for business purposes;
- finance to private and public sector businesses whether or not the finance is secured by residential property;
- external refinancing;
- internal refinancing;
- *finance leases* for *business* purposes; and
- *acceptance* of *bills of exchange* by your institution.

Generally exclude:

- finance to *households* for *housing* purposes. This should be reported on ARF 743.0;
- finance to *households* for *personal* purposes. This should be reported on ARF 745.0;
- *deposits*;
- the purchase of securities; and
- *borrower-accepted commitments* contingent on some specified eventuality [e.g. bill endorsements, guarantees, letters of credit, standby agreements] unless and until that eventuality occurs.

### 2.14.3 Credit limits

**Fixed-term loans**

The *credit limit* and *credit outstanding* on a *fixed-term business loan* as at the end of the month may be equivalent in many cases. However, there may also be instances where, through options like *redraw facilities* (or similar), *credit outstanding* differs from the *credit limit*.

**Charge cards**

Where an explicit *credit limit* is not available on a charge card, report the *credit limit* as the value of *credit outstanding*.

**Margin lending facilities**

See guidance provided for Item 3 of ARF 723.0.

### 2.14.4 Reporting construction finance and finance for the purchase of property by location

When reporting by location, report according to the location of the construction site or property that the finance will be used for, not the location of the branch where the *commitment* was made, where the headquarters of the business are located, or where the *collateral* is located [if these differ from the location sought].

Reporting institutions submitting ARF 741.0 are expected to be able to meet this requirement for the bulk of finance *commitments* in their portfolio.

Where a single *commitment* is taken out to fund the construction or purchase of property across multiple states, the entire value of the *commitment* should be reported against the state where the greatest value of the funds will be used.
2.14.5 Item 2.1: New borrower-accepted commitments for business loans – by purpose

Acquisitions

When reporting loans and finance leases for the purposes of acquisitions, either the accounting definition or legal definition of control may be used.

2.14.6 Reconciliations within ARF 741.0

Item 1.1 New borrower-accepted commitments to resident non-related parties during the month

The value of total new borrower-accepted commitments for fixed-term business loans to resident non-related parties reported in Item 1.1 (column 4) on ARF 741.0 is equivalent to new borrower-accepted commitments for fixed-term business loans to resident non-related parties reported in item 3.1 (column 1), less fixed-term margin lending. It is also equivalent to the sum of new borrower-accepted commitments for fixed-term business loans to resident non-related parties for small, medium and large business reported in item 2.1 (columns 1, 2 and 3), less fixed-term margin lending.

The sum of new borrower-accepted commitments for credit cards and other revolving credit facilities to resident non-related parties reported in item 1.1 (columns 1 and 3) on ARF 741.0 is equivalent to new borrower-accepted commitments for revolving credit business loans to resident non-related parties reported in item 3.1 (column 2), less revolving credit facilities for margin lending. It is also equivalent to the sum of new borrower-accepted commitments for revolving credit facilities to resident non-related parties for small, medium and large businesses reported in item 2.2 (columns 1, 2 and 3), less revolving credit facilities for margin lending.

See the table below for the specific items that should be equivalent, if it were not for the distribution of margin lending across selected fixed-term loan and revolving credit items on ARF 741.0.
<table>

</tbody>
</table>
2.15 ARF 742.0A/B: ABS/RBA Business Credit Stocks, Flows and Interest Rates (Standard) / (Reduced)

2.15.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.6 Australian and New Zealand Standard Industry Classification;
- 1.7 Business size;
- 1.8 Identifying (predominant) purpose class and sub-class;
- 1.10 Secured by residential property;
- 1.12 Types of financial assets and liabilities;
- 1.14 Identifying facilities;
- 1.15 Interest rates; and
- 1.16 Treatment of fixed interest rate products once the fixed period ends.

2.15.2 Business finance funded during month

Generally include:

- secured and unsecured finance;
- finance to private and public sector businesses whether or not the finance is secured by residential property;
- external refinancing;
- internal refinancing;
- finance leases for business purposes; and
- acceptance of bills of exchange by your reporting institution.

Generally exclude:

- finance to households for housing purposes. This should be reported on ARF 744.0A/B;
- finance to households for personal purposes. This should be reported on ARF 746.0A/B;
- deposits with financial institutions; and
- the purchase of securities.

2.15.3 Credit outstanding, net of offset account balances

For loans with attached offset accounts, report the value of the loan that would attract interest. For example:

- for an offset account that fully offsets interest payments (see Example 1), record the value of the loan less the offset account balance up to the value of credit outstanding (i.e. value reported should be greater than or equal to zero);
• for an **offset account** that only partially offsets interest payments, record the value of the **loan** less the portion of the **offset account** balance that is equivalent to a fully offset balance [see Example 2] up to the value of **credit outstanding** [i.e. value reported should be greater than or equal to zero].

For **loans** with attached **set-off accounts**, report the value of the **loan** less the value of **deposits** in the **set-off account** up to the value of **credit outstanding** [i.e. value reported should be greater than or equal to zero].

**Example 1: Full offset**

For a loan with $800 000 of **credit outstanding**, with $200 000 in a linked **offset account** that is fully offset against the outstanding balance of the **loan** for the purposes of calculating interest, the value of **credit outstanding, net of offset accounts** reported would be as follows:

\[ \$800 000 - \$200 000 = \$600 000 \]

**Example 2: Partial offset**

For a loan with $800 000 of **credit outstanding**, with $200 000 in a linked **offset account** that is partially offset against the outstanding balance of the **loan** for the purposes of calculating interest, the value of **credit outstanding, net of offset accounts** reported will depend upon the proportion of the linked **offset account** that is offset for the purposes of calculating interest. If 75% of the balance in the **offset account** is offset against the outstanding loan balance for the purpose of calculating interest, then the value of **credit outstanding, net of offset accounts** reported would be as follows:

\[ \$800 000 - (\$200 000 \times 75\%) = \$800 000 - \$150 000 = \$650 000 \]

2.15.4 Funded

**Internal refinances**

Where an **internal refinance** occurs, the total value of the refinance should be reported as ‘**funded** in the month’, not just the amount by which the **credit limit** was increased. This is to reflect the new **interest rate** that applies to the entirety of the funds as contributing to the average marginal rate on new lending.

**Construction loans**

Where construction **loans** are **funded** and **drawn down** in stages, report only the value **funded** in the month [not the total value of the **commitment**].

2.15.5 Split facilities (number)

See **Section 1.14 Identifying facilities** in general guidance.

Where a **facility** may involve both a mix of interest rate types [i.e. **fixed interest rate** and **variable interest rate**] and a mix of repayment types [e.g. **interest-only** and **amortising**], apportion value across the relevant line items. However, when reporting the number of **facilities** broken down by repayment type, report each **facility** only once according to the predominant repayment type. Similarly, when reporting the number of **facilities** broken down
by *interest rate* type, report each *facility* only once according to the predominant *interest rate* type.

### 2.15.6 Interest rates

See Section 1.15 Interest rates in general guidance.

As per the general guidance for *interest rates*, all *interest rates* reported are to be contractual rates, not effective rates [inclusive of some fees]. *Interest rates* reported are to exclude fees charged to borrowers; fees are to be reported separately on ARF 730.1.

### 2.15.7 Reconciliations within ARF 742.0A/B

**Table 6 Fixed-term business loans – by residual term**

For *credit outstanding*, the total number of *facilities*, value and *weighted average interest rate* for *fixed-term business loans* to *resident non-related parties* reported by business type in Table 6 [columns 3, 4 and 5] on ARF 742.0A/B is equivalent to *fixed-term loans* to *resident non-related parties* reported by business type in Table 3 [columns 3, 4 and], plus *fixed-term margin lending*.

For *funded in the month*, the total number of *facilities*, value and *weighted average interest rate* for *fixed-term business loans* to *resident non-related parties* reported by business type in Table 6 [columns 7, 8 and 9] on ARF 742.0A/B is equivalent to *fixed-term loans* to *resident non-related parties* reported by business type in Table 3 [columns 6, 7 and 8], plus *fixed-term margin lending*.

The value of *credit outstanding* for *fixed-term business loans* to *resident non-related parties* as at the end of the month reported in Item 7.13 is equivalent to the total value of *credit outstanding* for *fixed-term loans* to *resident non-related parties* for all business types in Table 3 [column 4], plus *fixed-term margin lending*.

See the table below for the specific items that should be equivalent, if it were not for the possible inclusion of both *fixed-term* and *revolving margin loans* in the *margin lending* item in Table 3.
Reconciliation within ARF 742.0A/B

**the possible inclusion of both fixed-term and revolving margin loans in the margin lending item**

2.16 ARF 743.0: ABS/RBA Housing Finance

2.16.1 General guidance
Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.8 Identifying (predominant) purpose class and sub-class;
- 1.9 Residential property purpose - owner-occupied and investment housing;
- 1.11 Location of property;
- 1.12 Types of financial assets and liabilities;
- 1.13 Borrower-accepted commitments;
- 1.14 Identifying facilities; and
- 1.16 Treatment of fixed interest rate products once the fixed period ends;

2.16.2 Applications and borrower-accepted commitments for housing finance
Generally include:

- secured and unsecured finance;
- finance to your employees;
- bridging finance for housing;
- external refinancing; and
- internal refinancing.

Generally exclude:

- finance for business purposes. This should be reported on ARF 741.0;
- finance for personal purposes. This should be reported on ARF 745.0; and
- commitments for revolving credit loans secured by residential property where the predominant purpose at application is business or personal. These should be reported on ARF 741.0 or ARF 745.0 as appropriate.

2.16.3 Portable home loans
Mortgage mobility is being offered by a number of lenders as a service to their borrowers. The resulting security substitution is likely to involve a borrower transferring the security on an existing housing loan from one residential property to another residential property.

Reporting guidance
In cases where there is no change to state of the residential property that the funds are being used for, and the borrower exercises the option under their existing loan agreement to transfer the security on the loan to another residential property, the transaction should not be reported as a new commitment.
In cases where there is a change to the state of the *residential property* that the funds are being used for, the transaction should be reported as a new *commitment*.

### 2.16.4 Interest offset arrangements and redraw facilities on fixed-term loans

Interest on a borrower’s savings is offset against interest owed on a *loan*. Some or all of the repayments in excess of the minimum required repayment can be withdrawn.

**Reporting guidance**

If the borrower only redraws the excess of repayments then there is no new finance associated with these arrangements. As such, no new *commitment* should be reported on any lending activity forms (ARF 741.0, ARF 743.0 and ARF 745.0). The redrawn amount should, however, be included in amounts drawn (credit outstanding).

Where more than the *excess repayments* are redrawn, then this is considered new lending finance. A new *commitment* should be reported in the relevant lending activity collection.

### 2.16.5 Bridging finance commitments

Bridging finance is typically a *short-term commitment* for finance that will be repaid once further finance has been obtained or the following the sale of property.

**Reporting guidance**

The total, or gross, value of bridging finance *commitments* should be reported. For example, if you make a *commitment* for bridging finance for $150,000 and your borrower anticipates repaying $100,000 upon the sale of their previous *residential property*, then the full, or gross, value of the *commitment* should be reported, i.e. $150,000, not the anticipated or actual net.

### 2.16.6 Item 1: New applications for housing loans

An *application* should be reported as *received* when sufficient information and/or relevant documentation has been submitted to allow the *application* to be initially assessed. After the *application* has been initially assessed, there may still be further information or documentation that is required from the borrower before a decision has been made to provide finance.

Where a borrower submits a single *loan application* that covers different purposes (e.g. a *loan* for *housing* purposes and a *loan* for *personal* purposes), use the predominant purpose principle to determine if the *loan application* should be reported as for *housing* purposes.

Some institutions may record multiple *applications* for the same borrower, where two different, alternative *loans* are applied for or where the features of the original *application* are varied. Alternatively, some institutions may record only one *application*. Either method is acceptable provided the *ADI* or *RFC* advises *APRA* by email the method they are using to report *applications*. If this method changes over time, *APRA* should also be advised by email at the time when the change occurs.
2.16.7 Item 2: New borrower-accepted commitments for housing loans – by location and purpose

Purpose sub-class

See Section 1.8 Identifying (predominant) purpose class and sub-class in general guidance.

Construction

Lending to *households* to purchase an off-the-plan *dwelling* should be reported as a *purchase of a newly erected dwelling*, not as a *construction loan*.

Example 1: Off-the-plan purchase

Consider a *household* seeking finance to purchase an off-the-plan *dwelling*. Upon completion of construction, the *household* may apply for finance from the *ADI* or *RFC*. The resulting *borrower-accepted commitment* would be recorded as for the purchase of a *newly erected dwelling* (not for *construction*). If the *household* had previously received a *loan* for the deposit, the additional finance for purchase should still be reported as finance for a *newly erected dwelling*, not as an *internal refinance*.

Alterations, additions and repairs

*Alterations, additions and repairs* should only be separately reported where this *purpose sub-class* represents the predominant purpose of the finance. It is likely that most finance for *alterations, additions and repairs* would instead qualify as an *internal* or *external refinance*.

Example 2: Top-up for alterations, additions and repairs on a different residential property

If new finance for *alterations, additions and repairs* relating to a different property exceeds the balance of an existing *housing loan* relating to the original property then the combined amount should be reported as a new *housing commitment* (with the *purpose sub-class* as *alterations, additions and repairs*) and the location should be determined by the location of the new property, not the existing one.

Foreign-sourced income

A *commitment* should be reported as being serviced by *foreign-sourced income* where any of the ‘allowable income’ taken into account by the reporting institution to assess the serviceability of that commitment qualifies as *foreign-sourced income*. This applies whether the commitment was made inside or outside the reporting entity’s standard serviceability assessment policy. The share of income that qualifies as *foreign-sourced income* is irrelevant.

If a borrower declares some *foreign-sourced income*, such as income streams derived from governments overseas or non-government entities incorporated overseas, but this income is not taken into account in the serviceability assessment, then the commitment should not be reported as being serviced by *foreign-sourced income*.

Please note, whether a *commitment* qualifies as including *foreign-sourced income* for EFS reporting purposes is not intended to impact lending to these customers.
2.16.8 Item 3: New borrower-accepted commitments for housing loans to resident first-home buyers – by location

Identification of first-home buyers should not rely solely on whether they are applying for a ‘First Home Owner Grant’.

A first-home buyer can only be a first-home buyer once. If a loan applicant previously bought a dwelling for the first time for investment purposes, but are now applying for loan for the purposes of owner-occupied housing for the first time, they would not be classified as a first-home buyer.

If there is more than one party to the loan, a loan is classified as being to a first-home buyer if none of the borrowing parties to the commitment have previously owned a dwelling.

Note that it is not necessary for the individual status of each party to the loan to be recorded, only the final determination (i.e. whether the loan qualifies as first-home buyer).

2.16.9 Item 5: Fixed-term housing loans to residents – stocks and flows reconciliation

Loans that were classified as written off as at the end of the previous reporting period should be excluded from the opening balance of credit outstanding. Loans that are classed as written off as at the end of the current reporting period should be excluded from the closing balance of credit outstanding.

Where loans are written off or recovered during the month, report the value of the loan written of or recovered in the item designated for this purpose. An adjustment should also be made in the balancing item to offset the value of any flow items associated with these loans.

Drawdowns

Report each draw down stage on construction loans as a draw down for a new loan (Item 5.2).

Balancing item

If the borrower was previously non-resident and became a resident during the month report in ‘Item 5.13 Other changes to the balance of loan credit outstanding between reporting periods’.

2.16.10 Item 7: Fixed-term housing loans outstanding to residents – future scheduled repayments

Scheduled repayments

The scheduled repayment may exceed the minimum required repayment possible under the loan conditions. For example, following an interest rate reduction, the customer may need to contact their lender in order to have the interest rate on their loan reduced to the lowest possible rate – otherwise, their scheduled repayment would remain unchanged.
If the **scheduled repayment** is automatically adjusted following an **interest rate** reduction, then this lower amount should be considered the **scheduled repayment** from the date at which it takes effect.

**Calculating the number of scheduled repayments**

To scale the stock of accumulated **excess repayments** and balances in associated **redraw** and **offset accounts** by the scheduled monthly repayment, the following steps may be taken:

1. convert the **scheduled repayment** to a monthly frequency if required, using simple multiplication or division.
2. divide the stock of accumulated **excess repayments** and balances in associated **redraw facilities** and **offset accounts** by the (implied) scheduled monthly repayment.

If the number of scheduled repayments does not equal a whole number, it should be rounded to the nearest whole number.

**Example 1**

Consider the situation where a customer has a **housing loan** with:

- **Credit outstanding** of $500,000;
- **Offset account** balance of $5,000;
- Available **redraw facility** balance of $10,000;
- Other **excess repayments** that can be used to meet future schedule payments of $2,500; and
- Scheduled monthly repayments of $625 per week.

1. Calculating funds available to meet future repayments:

   Value of offset balances, available redraw balances and other excess repayments (item 6.6) = closing balance of offset accounts (Item 6.1) + available redraw balances (Item 6.3) + stock of other excess repayments that can be used to meet future scheduled payments (Item 6.5).

   Value of offset balances, available redraw balances and other excess repayments = $5,000 + $10,000 + $2,500

   Value of offset balances, available redraw balances and other excess repayments = $17,500

2. Converting weekly repayments into monthly repayments:

   Scheduled monthly repayment = scheduled weekly repayment x 4

   Scheduled monthly repayments = $625 x 4

   Scheduled monthly repayment = $2,500
3. Calculating the number of future scheduled repayments

Future scheduled repayments (Item 7) = funds available to meet future repayments (step 1, or Item 6.6) / Scheduled monthly repayment (step 2)

Future scheduled repayments = $17,500 / $2,500

Future scheduled repayments = 7

Treatment of split facilities

See Section 1.14 Identifying facilities for general guidance.

Where a loan consists of a mix of interest-only and amortising components, split the scheduled repayment and stock of accumulated excess repayments and balances in associated redraw facilities and offset accounts and perform and report the calculation separately for both components of the facility.

2.16.11 Reconciliation between ARF 743.0 and ARF 720.2A/B

Item 6.1 Closing balance of offset accounts

The sum of the closing balance of offset accounts for fixed-term owner-occupied housing loans and fixed-term investment housing loans reported in Item 6.1 (columns 1 and 2) on ARF 743.0 should be less than or equal to the closing balance of housing loan offset accounts reported in item 1.1.1.1 (column 7/column 4) for all housing loans on ARF 720.2A/B.

The values may not be always be equal because the closing balance of offset accounts for fixed-term housing loans reported on ARF 743.0 excludes offset accounts linked to revolving credit housing loans and to housing loans that are 90 days or more past-due or impaired.

<table>
<thead>

</tr>
</tbody>
</table>
2.17 ARF 744.0A/B: ABS/RBA Housing Credit Stocks, Flows and Interest Rates (Standard) / (Reduced)

2.17.1 General guidance

Applicable items of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.8 Identifying [predominant] purpose class and sub-class;
- 1.9 Residential property purpose - owner-occupied and investment housing;
- 1.12 Types of financial assets and liabilities;
- 1.14 Identifying facilities;
- 1.15 Interest rates; and
- 1.16 Treatment of fixed interest rate products once the fixed period ends.

2.17.2 Housing finance funded during month

Generally include:

- secured and unsecured finance;
- finance to your employees;
- bridging finance for housing;
- external refinancing; and
- internal refinancing.

Generally exclude:

- finance for personal purposes. This should be reported on ARF 746.0A/B;
- finance for business purposes. This should be reported on ARF 742.0A/B; and
- revolving credit facilities that are secured by residential property where the predominant purpose at application is personal or business. These should be reported on ARF 746.0A/B or ARF 742.0A/B as appropriate.

2.17.3 Split facilities (number)

See Section 1.4 Identifying facilities for general guidance.

Where a facility may involve both a mix of interest rate types (i.e. fixed interest rate and variable interest rate) and a mix of repayment types (e.g. interest-only and amortising), apportion value across the relevant line items. However, when reporting the number of facilities broken down by repayment type, report each facility only once according to the predominant repayment type. Similarly, when reporting the number of facilities broken down by interest rate type, report each facility only once according to the predominant interest rate type.
2.17.4 Funded

Internal refinances
Where an internal refinance occurs, the total value of the refinance should be reported as ‘funded in the month’, not just the amount by which the credit limit was increased. This is to reflect the new interest rate that applies to the entirety of the funds as contributing to the average marginal rate on new lending.

Construction loans
Where construction loans are funded and drawn down in stages, report only the value funded in the month (not the total value of the commitment).

2.17.5 Item 1: Housing loans outstanding – by type

Value net of offset account balances
For loans with attached offset accounts, report the value of the loan that would attract interest. For example:

- for an offset account that fully offsets interest payments (see Example 1), record the value of the loan less the offset account balance up to the value of credit outstanding (i.e. value reported should be greater than or equal to zero);
- for an offset account that only partially offsets interest payments, record the value of the loan less the portion of the offset account balance that is equivalent to a fully offset balance (see Example 2) up to the value of credit outstanding (i.e. value reported should be greater than or equal to zero).

Example 1: Full offset
For a loan with $800 000 of credit outstanding, with $200 000 in a linked offset account that is fully offset against the outstanding balance of the loan for the purposes of calculating interest, the value of credit outstanding, net of offset accounts reported would be as follows:

$800 000 – $200 000 = $600 000

Example 2: Partial offset
For a loan with $800 000 of credit outstanding, with $200 000 in a linked offset account that is partially offset against the outstanding balance of the loan for the purposes of calculating interest, the value of credit outstanding, net of offset accounts reported will depend upon the proportion of the linked offset account that is offset for the purposes of calculating interest. If 75% of the balance in the offset account is offset against the outstanding loan balance for the purpose of calculating interest, then the value of credit outstanding, net of offset accounts reported would be as follows:

$800 000 – ($200 000 × 75%) = $800 000 – $150 000 = $650 000
2.17.6 Reconciliation between ARF 744.0A/B and ARF 720.1A/B

Item 1.1.1 Total owner-occupied housing credit outstanding to residents – of which: Revolving credit
The value of credit outstanding for revolving credit facilities for the purposes of owner-occupied housing reported in Item 1.1.1 [column 4] on ARF 744.0A/B should be greater than or equal to the value of credit outstanding reported for owner-occupied revolving credit facilities that are secured by residential property in Item 2.1.2.1.1.1 [column 1] on ARF 720.1A/B.

The values may not be always be equal because revolving credit facilities for the purposes of owner-occupied housing loans reported on ARF 744.0A/B may be unsecured or secured by collateral other than residential property.

Item 1.2.1 Total investment housing credit outstanding to residents – of which: Revolving credit
The value of credit outstanding for revolving credit facilities for the purposes of investment housing reported in Item 1.2.1 [column 4] on ARF 744.0A/B should be greater than or equal to the value of credit outstanding reported for investment revolving credit facilities secured by residential property in Item 2.1.2.1.1.1 [column 2] on ARF 720.1A/B.

The values may not be always be equal because revolving credit facilities for the purposes of investment housing loans reported on ARF 744.0A/B may be unsecured or secured by collateral other than residential property.

2.18 ARF 745.0: ABS/RBA Personal Finance

2.18.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.8 Identifying (predominant) purpose class and sub-class;
- 1.10 Secured by residential property;
- 1.12 Types of financial assets and liabilities; and
- 1.13 Borrower-accepted commitments.

2.18.2 Borrower-accepted commitments for personal finance

Generally include:

- secured and unsecured finance;
- finance to your employees;
- revolving credit facilities that are secured by residential property where the predominant purpose at application is personal;
- external refinancing; and
- internal refinancing.

Exclude:

- finance for housing purposes. This should be reported on ARF 743.0;
- finance for business purposes. This should be reported on ARF 741.0; and
- commitments for revolving credit facilities that are secured by residential property where the predominant purpose at application is housing or business. These should be reported on ARF 743.0 or ARF 741.0 as appropriate.

2.18.3 Credit limits

Charge cards
See the specific guidance for ARF 741.0.

Margin lending facilities
See guidance provided for Item 3 of ARF 723.0.
2.19 ARF 746.0A/B: ABS/RBA Personal Credit Stocks, Flows and Interest Rates (Standard) / (Reduced)

2.19.1 General guidance
Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.8 Identifying [predominant] purpose class and sub-class;
- 1.10 Secured by residential property;
- 1.12 Types of financial assets and liabilities;
- 1.14 Identifying facilities;
- 1.15 Interest rates; and
- 1.16 Treatment of fixed interest rate products once the fixed period ends.

2.19.2 Personal finance funded during month
Generally include:

- secured and unsecured finance;
- finance to your employees;
- revolving credit facilities that are secured by residential property where the predominant purpose at application is personal;
- external refinancing; and
- internal refinancing.

Exclude:

- finance for housing purposes. This should be reported on ARF 744.0A/B;
- finance for business purposes. This should be reported on ARF 742.0A/B; and
- revolving credit facilities that are secured by residential property where the predominant purpose at application is housing or business. These should be reported on ARF 744.0A/B or ARF 742.0A/B.

2.19.3 Credit card interest rates
See section on interest rates in general guidance.
2.20 ARF 747.0A/B: ABS/RBA Deposit Stocks, Flows and Interest Rates (Standard) / (Reduced)

2.20.1 General guidance

Applicable sections of general guidance include:

- 1.1 General guide to reporting by counterparty;
- 1.2 Residency;
- 1.3 Related parties;
- 1.4 Domestic books consolidation;
- 1.5 Standard Economic Sector Classifications of Australia;
- 1.12 Types of financial assets and liabilities;
- 1.15 Interest rates; and
- 1.18 Funds held on behalf of / in trust for clients.

2.20.2 Fixed-term deposits

Any deposit that provides a fixed date on which the funds are repayable should be treated as a fixed-term deposit.

If the fixed-term deposit is breakable – for example, the funds may be withdrawn prior to the fixed date after providing a notice of withdrawal (with or without a delay in receiving the funds) – the deposit should be treated as a fixed-term deposit until notice of withdrawal is provided.

Once a notice of withdrawal is provided:

- if there is a fixed date in the future on which the funds may be withdrawn [i.e. in 30 days] then:
  - the deposit should still be classified as a fixed-term deposit;
  - the residual term should be based on the new fixed date [e.g. 30 days’ time]; and
  - the deposit should not be reported as a new fixed-term deposit [on ARF 747.0A/B].
- if there is no fixed date in the future on which the funds may be withdrawn – i.e. they are available immediately or within a few days:
  - the deposit should no longer be classified as a fixed-term deposit [it should be classified as a transaction deposit or other non-transaction deposit as appropriate].

2.20.3 Rolling notice of withdrawal accounts

Deposit products without a fixed maturity date that offer redemption following a notice of withdrawal period [typically 30 days] should be classified as other non-transaction deposit accounts until notice of withdrawal is provided. Once notice of withdrawal is given:

- if there is a fixed date in the future on which the funds may be withdrawn [i.e. in 30 days] then:
  - the deposit should be classified as a fixed term deposit; the residual term should be based on the new fixed date [e.g. 30 days’ time]; and
  - the deposit should be reported as a new fixed-term deposit [on ARF 747.0A/B].
• if there is no fixed date in the future on which the funds may be withdrawn – i.e. they are available immediately or within a few days:
  o the deposit should be classified as transaction deposit or other non-transaction deposit as appropriate.

2.21 ARF 748.0A/B: ABS/RBA Wholesale Funding Stocks, Flows and Interest Rates (Standard) / (Reduced)

2.21.1 General guidance
Applicable items of general guidance include:

• 1.1 General guide to reporting by counterparty;
• 1.2 Residency;
• 1.3 Related parties;
• 1.4 Domestic books consolidation;
• 1.8 Identifying (predominant) purpose class and sub-class;
• 1.12 Types of financial assets and liabilities;
• 1.15 Interest rates;
• 1.16 Treatment of fixed interest rate products once the fixed period ends; and
• 1.17 Residual maturity.

2.21.2 Interest rates on debt securities
Contractual interest rates are to be reported as an outright rate rather than a spread. Where the security is issued in a foreign currency, the interest rate should not be converted back to an implied AUD rate. As for other interest rates, the interest rate provided should be on an annualised basis.

Examples
A bank issues a floating interest rate debt security in Australia at a spread over 3-month BBSW.

• The interest rate reported would be the end-of-period value of 3-month BBSW plus the spread (annualised if required).

A bank issues a fixed interest rate debt security in Australia with a semi-annual coupon payment of 2.5 per cent.

• The interest rate reported would be the 2.5 per cent semi-annual rate, annualised.

A bank issues a discount security in Australia, with an implied (annualised) yield of 2 per cent.

• The interest rate reported would be 2 per cent.

A bank issues a floating interest rate debt security in the US at a spread over 1-month LIBOR.
• The interest rate reported would be the end-of-period value of 1-month LIBOR plus the spread (annualised if required).

A bank issued a fixed interest rate debt security in the UK with a semi-annual coupon payment of 4 per cent.

• The interest rate reported would be the 4 per cent semi-annual rate, annualised.

### 2.21.3 Reporting term or tenor in a direct entry field

The reporting of term or tenor should be based on the loan or instrument issued, not the underlying assets.

In most cases, institutions are required to identify the term or tenor of a loan or instrument as belonging to one of several categories or buckets.

In some cases the weighted average term or tenor is requested as a direct entry field. In these cases, the instructions direct institutions to express the term or tenor as the number of days [from origination for the original term or tenor, and from the end of the reporting period for residual maturity] divided by 365 days. This standardises the term to one year, for ease of calculation and reporting.

**Example**

A 90-day term deposit (original maturity) would be expressed as 90 days/365 days = 0.25 years

### 2.21.4 Calculating a weighted average term

The weighted average term is the weighted sum of the individual terms (original or residual, as directed) where the weights used are the corresponding balances expressed as a share of the total balance for that category.

**Weighted average term** may be calculated using the formula below.

\[
\text{weighted average term} = \sum_i \text{term}_i \times \text{weight}_i
\]

Where weight, = the balance for item i divided by the sum of balances for all items i.

**Example**

A bank’s short-term debt securities on issue are as follows:

<table>
<thead>
<tr>
<th>Example: short-term debt securities on issue</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Short-term debt security</td>
<td>Outstanding balance</td>
</tr>
<tr>
<td>1</td>
<td>$350m</td>
</tr>
<tr>
<td>2</td>
<td>$600m</td>
</tr>
<tr>
<td>3</td>
<td>$550m</td>
</tr>
</tbody>
</table>
The **weighted average term** would be calculated as:

\[
0.25 \text{ years} \times \frac{350m}{1500m} + 0.17 \text{ years} \times \frac{600m}{1500m} + 0.38 \text{ years} \times \frac{550m}{1500m} = 0.27 \text{ years}
\]

### 2.21.5 Asset-backed securities

Report **asset-backed securities** that are issued by **related parties** (such as an **SPV**) where the underlying assets are held on the balance sheet of the reporting institution in accordance with accounting principles.

Report the value, **interest rate** and **tenor** based on the **asset-backed securities** issued and not the underlying assets.

### 2.21.6 Bills of exchange

**Bills of exchange** should be treated as **short-term debt securities**.

For other **debt securities** report the **interest rate** on a **bill of exchange** as the annualised yield. Do not report the discount rate.

### 2.21.7 Item 3: Benchmark rate on senior unsecured debt

The guiding principle in reporting Item 3 is to report the **ADI** or **RFC**’s indicative wholesale funding cost curve for **senior unsecured debt** in the relevant currency, as would be used in the calculation of internal funds transfer pricing.

The calculation of the reported **benchmark rate** curve may vary across institutions. It is expected that it would typically be based on the price of recent primary market issuance by the reporting institution or other comparable institutions, but it may also be interpolated or based on secondary market spreads or estimated in some other way where recent comparable issuance is not available. The reported rates should incorporate any relevant costs (such as hedging costs and issuance fees) that are included in the internal calculation of the entity’s **benchmark rate** reference curve.

The unsecured funding **benchmark rate** is not to be expressed as a spread. That is, even if the reporting institution would typically consider that rate as a spread over a reference market rate for internal purposes, then the applicable market rate, as at the end of the reporting period, should be added to the spread when reporting the **benchmark rate**.

The unsecured funding **benchmark rate** for a foreign currency should be reported on an AUD (or AUD equivalent) basis. Adjustments for relevant hedging costs (such as a cross-currency basis) should be included in the figure reported for the USD and EUR rates.

### 2.21.8 Item 4: Other interest-bearing liabilities outstanding

As a guide, include any **interest-bearing** liabilities contained in Item 19 reported on ARF 720.0A/B that are not already reported in this form.

Do not include any **interest-bearing** liabilities due to **related parties**.
2.21.9 Item 5: Other new interest-bearing liabilities

As a guide, include any interest-bearing liabilities reported in Item 4 that did not exist prior to the reporting period.

2.21.10 Item 6: Hedging

The interest income and expense associated with the hedging of banking book assets and liabilities relates specifically to payment streams on derivatives used to hedge banking book assets and/or liabilities.

These amounts should reflect the payables/receivables in the month, irrespective of whether these were actually paid or received. Foreign currency interest payments/receipts should be converted to Australian dollars at the end-of-period spot rate.

Where an ADI or RFC is unable to separately report interest income and expense items, they may report the net interest as either an income or an expense item, as applicable.

2.21.11 Reconciliation between ARF 748.0A and ARF 730.0

Item 6.1 Total derivatives hedging banking book assets and liabilities

Interest income earned and interest expense incurred on total derivatives hedging banking book assets and liabilities reported on ARF 748.0A should be equivalent to the interest income earned and interest expense incurred on derivative hedging banking book assets and liabilities reported on ARF 730.0, apart from differences in the reporting periods. ARF 748.0A is reported monthly while ARF 730.0 is reported quarterly, thus the sum of the monthly values reported on ARF 748.0A during the quarter, should equal the values reported on ARF 730.0 for the same quarter. See the table below for the specific items that should be equivalent, if it were not for the different reporting periods.

<table>
<thead>
<tr>
<th>Reconciliation between ARF 748.0A and ARF 730.0</th>
</tr>
</thead>
<tbody>
<tr>
<td>once differences in reporting periods are taken into account</td>
</tr>
</tbody>
</table>

<table>
