

## Overview

### What we have done to date

**293**

attendees across  
10 webinars

**63**

responses to the  
quick survey

**5**

submissions have been  
received to the 'Key  
items for stakeholder  
consideration'

### Upcoming activities

**7**

industry  
roundtables,  
26 March – 13 April

**4**

cross-industry  
technical working  
sessions  
late April - early May

**26**

days remaining to  
respond to the 'Key  
items for stakeholder  
consideration'  
open until 20 April

---

## What we've heard

### Solution requirements

- The user experience needs to improve. This could include a web-based interface and the ability to view submitted data within the solution.
- The new solution should support a range of data submission formats.
- A variety of data submission methods are used across industry with manual data entry more common than structured copy and paste and XBRL import. Many entities use MS Excel to transform data into a format accepted by APRA.
- There is significant interest in the potential functionality of the new system. A new solution needs to consider:
  - multiple data submission mechanisms
  - comparison of data submitted across periods
  - improved processes to validate errors
  - multiple users with different access levels
  - collection of unstructured and ad-hoc data.

### Transition and implementation considerations

- To lessen the burden of transition, the implementation timeframe needs to consider competing priorities such as EFS (for ADIs and RFCs). A staged rollout across industries is also favoured.
- Smaller organisations emphasise the need for the new solution to not disproportionately impact them.

### Engagement preferences

The implementation process needs to include:

- Regular and consistent updates throughout design and implementation.
- Education and training to best support transition.
- Sufficient time for testing and feedback from industry.

### APRA's data transformation agenda

- APRA needs to modernise its approach to data. This includes the replacement of D2A.
- The implementation of the new Data Collection Solution needs to align with changes being implemented by other government agencies (especially ASIC and the ATO).
- It is encouraging that APRA is engaging software and RegTech vendors to contribute to the solution. This includes the replacement of D2A.

# Who we've heard from

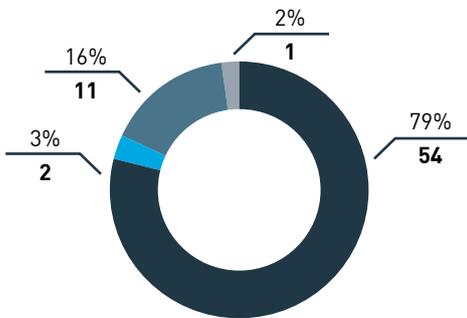

A total of 68 responses have been received to date, 63 responses to the quick survey and 5 responses to the 'Key items for stakeholder consideration'.

Over 150 questions have been submitted prior to and during webinars.

The stakeholder group, entity size and industry of respondents to date are shown below.

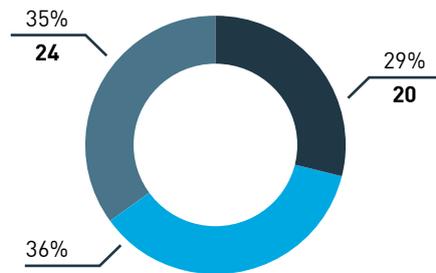

## Figure 1: Respondent demographics

### Stakeholder Group (n=68)

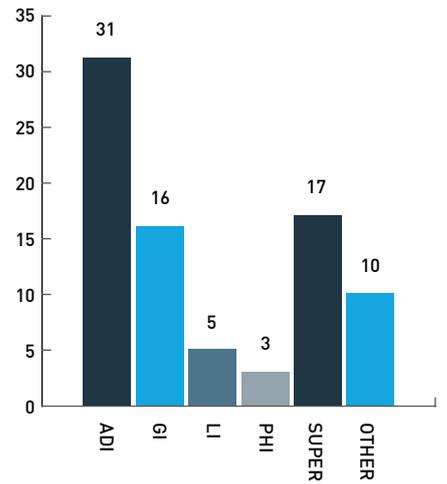

- Regulated by APRA
- Report data to APRA
- Service provider
- Industry body

### Entity Size (n=69)

- Small
- Medium
- Large

### Industry (n=82)

NB: Questions were not mandatory and respondents could select multiple categories regarding which industry they belong to.
